

InnovateX Revenue OS PRD - BRD Matched

InnovateX Revenue OS

Product Requirements Document

A vertical AI-powered Revenue Operating System for the modern expert-led, digital, and international service economy.

Field	Value
Product	InnovateX Revenue OS
Company	InnovateX
Founder	Himanshu Kumar
Document Type	Product Requirements Document (PRD)
Version	1.2 — 10/10 BRD-Matched Execution Edition
Date	June 2, 2026
Status	10/10 Execution-Grade — Fully Matched to BRD v3.1, Build-Ready, QA-Ready, Attribution-First
Source of Truth	InnovateX Revenue OS Software BRD v3.1
Intended Readers	Founder, Product Managers, Engineering, CTO, Designers, AI Engineers, QA, GTM, Investors
Confidentiality	Internal — InnovateX Strategic Document

Executive Positioning

InnovateX Revenue OS is the AI-powered revenue infrastructure that captures, qualifies, nurtures, books, converts, tracks, and retains customers — across CRM, WhatsApp, email, SMS, calls, bookings, funnels, automations, dashboards, and payments — for coaches, EdTech, SaaS founders, ecommerce owners/agencies, and high-value international local businesses.

Strategic Callout

Services are the wedge. Software is the destination. The product is built through service delivery validation, then productized into a multi-tenant SaaS platform, then scaled into an ecosystem-grade revenue infrastructure layer.

Table of Contents

#	Section	Purpose
1	Cover Page	Document identity
2	Table of Contents	Navigation
3	Executive Summary	Strategic overview
4	Product Vision	4–5 year horizon
5	Product Mission	Immediate mandate
6	Business Context	Service-to-SaaS architecture
7	Target Audience & ICPs	Six-segment ICP breakdown
8	Market Strategy	Tier 1 / Tier 2 / Avoid markets
9	Product Positioning	Category creation
10	Core Problem Statement	11-dimension problem analysis
11	Product Goals	Business, user, technical, AI
12	Product Principles	Operating philosophy
13	User Roles & Permissions	RBAC matrix
14	User Personas	9 detailed personas
15	Jobs To Be Done	JTBD by segment
16	User Journeys	10 mapped journeys
17	Product Scope	MVP → V1 → V2 → Future
18	MVP Definition	Locked MVP boundary
19	Core Product Modules	16 module specs
20	Detailed Feature Requirements	Feature matrix
21	Attribution & Tracking Engine	Source-to-conversion layer
22	Dashboard Requirements	12 dashboards
23	Analytics & Reporting	Report specifications
24	AI Requirements	Practical AI features
25	Automation Requirements	Workflow automation
26	Integration Requirements	Integration matrix
27	Data Requirements	Data entity catalog
28	Event Taxonomy	Tracking event schema
29	UX Requirements	UX philosophy
30	UI Requirements	UI standards
31	Onboarding Requirements	Assisted → self-serve
32	Security Requirements	Security architecture
33	Compliance & Privacy	Legal & regulatory

#	Section	Purpose
34	Non-Functional Requirements	NFRs
35	System Architecture	Product-level technical
36	Acceptance Criteria	Testable criteria
37	Prioritization Matrix	P0–P2 / Future / Avoid
38	Roadmap	Phase 0 → Phase 6
39	GTM Alignment	Sales & growth motion
40	Pricing & Packaging Logic	Package architecture
41	Risks & Mitigations	Risk matrix
42	Assumptions	What we believe
43	Open Questions	What needs answering
44	Traceability Matrix	BRD → PRD mapping
45	Final Recommendations	Founder direction
46	Final PRD Quality Audit	Self-assessment
47	PDF Design Notes for Export	Visual specifications
48	10/10 PRD Hardening Layer	Engineering, QA, data, AI, launch, and operating-system upgrades
49	BRD Alignment and Coverage Layer	Requirement-by-requirement matching against BRD v3.1

2. Document Control and BRD Alignment Summary

Field	Value
PRD Version	1.2 — 10/10 BRD-Matched Execution Edition
Matched BRD	InnovateX Revenue OS Software BRD v3.1 — 10/10 Revised Audience + Attribution Tracking Edition
Match Method	Section-by-section and requirement-family mapping from BRD to PRD
Match Scope	Audience, ICPs, product vision, business objectives, software business requirements, functional requirements, tracking, AI, automation, integrations, data, security, compliance, dashboards, onboarding, architecture, risks, roadmap, and service-to-software alignment
Coverage Verdict	Fully aligned at PRD level; remaining items marked as To Be Finalized or Future where BRD also marks them as unresolved or phase-gated
Primary Build Source	PRD sections 17–38 and 48–49
Primary Governance Source	PRD sections 36, 41–44, 48.12–48.14, and 49

BRD Match Principle: The PRD must translate every BRD business requirement into buildable product behavior, acceptance criteria, data needs, permissions, or explicit future-scope governance. Nothing from the BRD should remain invisible to product, engineering, QA, AI, data, support, or GTM.

2.1 What Was Upgraded in This 10/10 Edition

This edition converts the PRD from a strong strategy-and-product document into a more execution-grade product operating document. The upgrade focuses on the gaps that usually stop SaaS PRDs from becoming build-ready: requirement IDs, launch gates, data governance, AI evaluation, QA depth, dependency ownership, release discipline, and implementation governance.

Upgrade Area	What Was Added / Strengthened	Why It Matters
Requirement precision	Added hardening layer with build rules, Definition of Ready, Definition of Done, and release gates	Makes the PRD usable by CTO, PM, engineering, design, and QA without ambiguity
MVP discipline	Added build-now vs validate-later decision rules	Prevents feature bloat and keeps the software aligned with service delivery
Attribution trust	Added attribution QA, data reconciliation, confidence labels, and source-loss handling	Makes tracking reliable enough for founders and operators to trust
AI quality	Added AI evaluation, guardrails, fallback rules, and human-review thresholds	Reduces hallucination, misqualification, and unsafe automation risk
Data governance	Added ownership, retention, consent, auditability, and event-quality standards	Improves compliance readiness and future enterprise trust
Engineering execution	Added implementation epics, dependency map, QA strategy, observability, and release checkpoints	Allows the team to convert the PRD into sprint-level execution
Investor readiness	Added moat logic, KPI hierarchy, validation gates, and defensibility proof points	Makes the document stronger for validation, funding, and senior stakeholder review
Operator readiness	Added service-to-product feedback loops, client onboarding controls, and operating cadences	Ensures services remain the wedge while software becomes the destination

10/10 Upgrade Principle: A PRD is not complete when it describes features. It is complete when product, engineering, design, QA, AI, GTM, support, and operations can all execute from it without guessing.

3. Executive Summary

3.1 What is InnovateX Revenue OS?

InnovateX Revenue OS is a **vertical, AI-native, WhatsApp-aware, multi-tenant SaaS platform** that gives expert-led, digital, and qualified international local businesses a single operating system to run their entire revenue function — from the first ad click to a paying retained customer.

Unlike generic CRMs, it is built around how these businesses actually sell: high-touch, conversation-heavy, founder-dependent, and trust-driven. Unlike automation tools, it unifies the workflow rather than scattering it. Unlike attribution tools like Hyros, it tracks the **full revenue journey**, not just ad clicks.

3.2 Who is it for?

Six tightly defined Ideal Customer Profiles (ICPs):

Segment	Priority	Why They Need It
Coaches	Primary	Lead leakage, founder dependency, weak follow-up
EdTech / Enrollment businesses	Primary	Enrollment leakage, cohort launch chaos
SaaS Founders	Primary	GTM clarity, demo pipeline, founder-led sales
Ecommerce Owners	Secondary	Cart recovery, repeat purchase, retention
Ecommerce Agencies	Secondary	Client delivery standardization, reporting
International Local Businesses	Expansion	Missed inquiries, appointment leakage

 **Important Exclusion:** Local businesses in **India** are explicitly not the target audience unless validated later. Local businesses in **weak markets** are excluded outright.

3.3 What problem does it solve?

Expert-led and digital businesses lose 30–60% of potential revenue not because their offer is weak, but because **lead flow, qualification, nurture, booking, follow-up, payment, and attribution are scattered** across WhatsApp, spreadsheets, calendars, ad managers, payment links, and the founder’s memory. The founder becomes the bottleneck. Revenue becomes invisible.

3.4 Why does it exist?

InnovateX, as a service business, repeatedly discovered the same workflow gaps across dozens of clients. The Revenue OS productizes those workflows into a scalable software platform — so the service business gains delivery leverage, and the SaaS business gains a validated, vertical-first product.

3.5 Why is this strategically important?

Strategic Lever	Impact
Service delivery acceleration	Reduce build time from weeks to days
Workflow lock-in	Every client's revenue runs on InnovateX
Data moat	Anonymized benchmarks across verticals
Hybrid revenue	Services fund SaaS development; SaaS scales services
Category creation	"Revenue OS" — not CRM, not automation, not attribution

3.6 How does software support services?

The software is the **operating layer** of every InnovateX service engagement:

- **Diagnostic** → uses platform to audit the client's revenue funnel
- **Revenue OS Build** → installs the platform with verticalized templates
- **Revenue OS Operator** → runs the platform weekly for the client

Every service hour produces a learning that flows back into the product backlog.

3.7 How does it become a scalable SaaS?

The product evolves across six phases — from internal delivery tool → assisted client portal → private beta SaaS → public SaaS → advanced AI/attribution platform → ecosystem & white-label platform. Each phase has a clear go/no-go gate.

 **Executive Callout**

“**Services are the wedge. Software is the destination.**” The product must not be over-engineered before service evidence proves it. The product must not be under-engineered such that it cannot scale. The discipline is to **build only what improves revenue workflow, visibility, or delivery scalability.**

4. Product Vision

4.1 4–5 Year Vision Statement

In 4–5 years, InnovateX Revenue OS becomes the default operating system that coaches, EdTech businesses, SaaS founders, ecommerce owners/agencies, and qualified international local businesses run their entire revenue function on — capturing, qualifying, nurturing, converting, tracking, and retaining customers across every channel they sell on, with AI assisting every step and attribution tying every dollar back to its source.

4.2 Vision Evolution Across Phases

Phase	Stage	Vision Outcome
Phase 1	Internal Delivery Tool	Power InnovateX's own service delivery
Phase 2	Assisted Client Platform	Clients log in to see their revenue system
Phase 3	Private Beta SaaS	Validated design partners self-operate workflows
Phase 4	Public SaaS	Multi-vertical assisted-self-serve product
Phase 5	Advanced AI + Attribution	Full source-to-revenue intelligence layer
Phase 6	Ecosystem / White-label	Agencies and partners build on the platform

4.3 Product Vision Roadmap Diagram

4.4 Vision Anchors

Anchor	Description
Revenue-first	Every feature must trace back to revenue impact
Vertical depth	Coaches, EdTech, SaaS, ecommerce, international local — done deeply, not broadly
AI-native	AI is woven into qualification, nurture, calls, and reporting — not bolted on

Anchor	Description
WhatsApp-aware	WhatsApp is a first-class citizen but not the only channel
Tracking-first	Attribution is a core module, not an afterthought
Service-validated	No feature ships without service-delivery evidence
Multi-tenant scalable	Built for one tenant or ten thousand

5. Product Mission

5.1 Immediate Mission

Give one operating layer to expert-led and digital businesses so they capture every lead, qualify without founder involvement, nurture across channels, book qualified meetings, track every source-to-conversion, and retain customers — all without scattered tools or manual founder bottleneck.

5.2 Mission Pillars

#	Pillar	Concrete Outcome
1	Capture every lead	Zero leads lost between source and CRM
2	Qualify automatically	AI handles routine qualification; humans handle nuance
3	Nurture intelligently	Multi-channel sequences that pause, branch, and personalize
4	Book qualified meetings	Calendar-integrated booking with reminders and reschedule logic
5	Manage pipeline visibly	Kanban + timeline + tasks unified per lead
6	Track attribution end-to-end	Source → click → lead → booking → call → conversion → retention
7	Report revenue visibility	Owner sees what's working in plain language
8	Reduce founder/team manual work	Replace spreadsheets, WhatsApp chaos, and tab-switching

5.3 What the Mission Explicitly Excludes

Not the Mission	Why
Becoming a generic CRM	Vertical depth wins over horizontal breadth
Becoming a Hyros clone	Hyros tracks ads; we track the full revenue journey
Becoming an ad management tool	Ads belong upstream of our system
Becoming a course platform	We are not LMS
Becoming a finance/accounting tool	We are not a books or invoicing platform
Building features without service evidence	We do not pre-build features that may not be needed

6. Business Context

6.1 Company Identity

InnovateX is an **AI-powered revenue infrastructure company** that installs, operates, and productizes revenue systems for service-led and digital businesses. Founded by Himanshu Kumar, the company operates as a **hybrid service + software company** where services are the market wedge and InnovateX Revenue OS is the software destination.

6.2 The Three-Layer Business Model

Layer	What It Does	Software's Role
Diagnostic	Audits client's revenue funnel, identifies leaks, builds roadmap	Provides the audit workspace and source-leak scorecard
Revenue OS Build	Installs CRM, AI, WhatsApp, dashboards, automations	Provides the platform being installed
Revenue OS Operator	Runs the system weekly, optimizes, reports	Provides the cockpit for the operator

6.3 Service-to-Software Feedback Loop

Every service engagement produces three artifacts that strengthen the product:

- 1. **Repeated Workflows** → become software modules
- 2. **Client Pain Points** → become feature requests
- 3. **Delivery Friction** → becomes automation candidates

6.4 Why This Model Wins

Advantage	Explanation
Validated demand	Every feature is built against real client need
Cash flow	Services fund SaaS R&D without dilution
Workflow lock-in	Clients can't easily switch once embedded
Data moat	Anonymized benchmarks across hundreds of clients
Operator advantage	InnovateX team uses the product daily, surfacing bugs fast
Customer success built-in	Retainer customers are essentially design partners

6.5 Strategic Guardrails

⚠ **The product must not become:** - A generic CRM - A generic marketing automation tool - A bloated all-in-one platform - A Hyros clone - A course platform - A general agency dashboard

✅ **The product must remain:** - Vertical and revenue-focused - WhatsApp-aware but channel-agnostic - AI-assisted but human-controlled - Service-validated before public launch

7. Target Audience and ICPs

InnovateX Revenue OS serves six tightly defined ICPs. Each has its own template, prompt library, and dashboard pack within the same core platform.

7.1 ICP 1 — Coaches

Attribute	Detail
Business Profile	Solo or small-team experts selling 1:1, group, or cohort coaching
Typical Size/Stage	\$5K–\$100K/month revenue; 1–5 person team
Revenue Operation Problem	Lead leakage on Instagram/YouTube/ads, founder doing all qualification, ghosted prospects, weak follow-up
Current Tools/Process	WhatsApp, Google Sheets, Calendly, Razorpay, manual ad tracking
Buying Trigger	"I'm losing leads I paid to acquire" / "I can't scale because I'm the bottleneck"
Core Pain Points	Founder dependency, no source visibility, no qualification system, no nurture sequences
Desired Outcome	More qualified booked calls, less founder time, clearer revenue picture
Willingness to Pay Logic	High — direct revenue impact, easy ROI math
Best-Fit InnovateX Offer	Coach Revenue OS: Diagnostic → Build → Operator
Best-Fit Software Template	Coach Revenue OS Template
Must-Have Features	Lead capture, AI qualification, WhatsApp nurture, calendar booking, pipeline, attribution
Nice-to-Have Features	Call summaries, proposal drafts, weekly briefing
Don't Need Initially	Multi-touch attribution, white-label, public API
Retention Reason	Revenue infrastructure becomes operationally indispensable
Churn Risk	Setup friction, AI quality issues, WhatsApp policy violations
Success Definition	2x qualified bookings, 50%+ less founder time on qualification

7.2 ICP 2 — EdTech / Enrollment Businesses

Attribute	Detail
Business Profile	EdTech businesses running cohorts, courses, bootcamps, certifications
Typical Size/Stage	\$50K–\$2M/month; 5–50 person team with counselor function
Revenue Operation Problem	Webinar-to-enrollment leakage, counselor follow-up chaos, cohort launch firefighting
Current Tools/Process	LMS + spreadsheets + WhatsApp + manual counselor tracking
Buying Trigger	Launch cycle pain, low enrollment rate, founder fatigue from each cohort

Attribute	Detail
Core Pain Points	Inbound floods during launches, no enrollment pipeline visibility, counselor accountability gaps
Desired Outcome	Enrollment pipeline operates like a system, not chaos
Willingness to Pay Logic	Very high — enrollment loss is directly measurable
Best-Fit InnovateX Offer	EdTech Enrollment OS
Best-Fit Software Template	EdTech Enrollment OS Template
Must-Have Features	Webinar lead capture, counselor qualification, enrollment pipeline, cohort/batch fields, payment follow-up
Nice-to-Have Features	Counselor performance dashboards, cohort attribution, AI follow-up drafts
Don't Need Initially	Multi-language support, white-label
Retention Reason	Each cohort gets easier; switching cost rises with each launch
Churn Risk	Counselor adoption resistance, integration with LMS not deep enough
Success Definition	Enrollment rate up by 20–40%, counselor productivity up 2x

7.3 ICP 3 — SaaS Founders

Attribute	Detail
Business Profile	Early-to-growth SaaS startups doing founder-led or small-team sales
Typical Size/Stage	\$0–\$1M ARR; 2–20 person team
Revenue Operation Problem	No GTM system, demo pipeline chaos, founder doing every demo
Current Tools/Process	HubSpot Free + Calendly + Stripe + Notion + ad-hoc
Buying Trigger	“I need to scale GTM without hiring 5 SDRs” / “I lost track of warm leads”
Core Pain Points	Demo no-shows, no follow-up after demo, no pipeline clarity, no source attribution
Desired Outcome	Predictable demo-to-customer pipeline
Willingness to Pay Logic	Moderate — depends on competing with HubSpot/Pipedrive
Best-Fit InnovateX Offer	SaaS GTM + Product OS
Best-Fit Software Template	SaaS GTM OS Template
Must-Have Features	Demo request capture, AI qualification, demo booking, pipeline, post-demo follow-up
Nice-to-Have Features	Onboarding task tracking, call intelligence, proposal drafts
Don't Need Initially	WhatsApp-only workflows, regional language support
Retention Reason	Pipeline data accumulates; CRM switch cost rises
Churn Risk	Comparison with mature CRMs, missing power-user features
Success Definition	Demo-to-close cycle reduced, conversion rate up

7.4 ICP 4 — Ecommerce Owners

Attribute	Detail
Business Profile	DTC ecommerce brands selling physical or digital goods
Typical Size/Stage	\$20K–\$500K/month GMV
Revenue Operation Problem	Cart abandonment, no retention flows, no source attribution, repeat purchase gap
Current Tools/Process	Shopify + Klaviyo + Meta Ads + ad-hoc WhatsApp
Buying Trigger	“iOS 14 broke my tracking” / “My LTV is unclear” / “I need cart recovery on WhatsApp”
Core Pain Points	Attribution post-iOS14, retention flows, customer lifecycle automation
Desired Outcome	Higher LTV, better attribution, WhatsApp recovery flows
Willingness to Pay Logic	Moderate — depends on integration depth with Shopify/Klaviyo
Best-Fit InnovateX Offer	Ecommerce Conversion & Retention OS
Best-Fit Software Template	Ecommerce Revenue OS Template
Must-Have Features	Customer lifecycle events, cart recovery, retention sequences, campaign attribution
Nice-to-Have Features	Repeat purchase prediction, segment-based nurture
Don't Need Initially	Coaching-style call intelligence
Retention Reason	LTV uplift, retention automation indispensable
Churn Risk	Klaviyo/Mailchimp competition, Shopify-native alternatives
Success Definition	LTV up, repeat purchase rate up, attribution clarity

7.5 ICP 5 — Ecommerce Agencies

Attribute	Detail
Business Profile	Agencies serving ecommerce brands (ads, email, CRO, retention)
Typical Size/Stage	5–50 person agencies, \$30K–\$500K/month retainers
Revenue Operation Problem	Client delivery inconsistency, reporting overhead, retention risk
Current Tools/Process	Triple Whale + Klaviyo + ClickUp + Slack + Looker Studio
Buying Trigger	“Reporting takes us 8 hours/week per client” / “Clients churn because they don't see results”
Core Pain Points	Standardizing delivery across clients, automated reporting, QBR efficiency
Desired Outcome	Standardized delivery + automated client reporting + higher retention
Willingness to Pay Logic	High — direct margin impact via operational efficiency
Best-Fit InnovateX Offer	Agency Client Revenue OS
Best-Fit Software Template	Agency Delivery + Client Revenue OS Template
Must-Have Features	Multi-client workspaces, client health scoring, QBR generator, reporting automation

Attribute	Detail
Nice-to-Have Features	White-label, agency-level rollup dashboards
Don't Need Initially	End-customer-facing AI qualification
Retention Reason	Operational dependency across every client
Churn Risk	White-label requirement gap, integration depth gap
Success Definition	Time-per-client down, client NPS up, retention up

7.6 ICP 6 — International Local Service Businesses

Attribute	Detail
Business Profile	Local service businesses (dental, med spa, home services, legal, beauty) in strong international markets
Typical Size/Stage	1–10 locations, \$500K–\$5M annual revenue
Revenue Operation Problem	Missed inquiries, slow response, no-shows, weak source-to-appointment tracking
Current Tools/Process	Google My Business + phone + paper calendar + ad-hoc text
Buying Trigger	"I'm paying for Google Ads but don't know which calls book" / "We lose half our inquiries"
Core Pain Points	Speed-to-lead, appointment booking, follow-up, review/referral generation
Desired Outcome	More booked appointments per inquiry, less leakage
Willingness to Pay Logic	High in strong markets (USA, UAE, UK, AU, CA, KSA, SG); low in weak markets
Best-Fit InnovateX Offer	International Local Lead Conversion OS
Best-Fit Software Template	Local Lead Conversion OS Template (<i>Future — gated by market validation</i>)
Must-Have Features	Inquiry capture, instant response, appointment booking, reminders, no-show recovery
Nice-to-Have Features	Review/referral automation, multi-location dashboards
Don't Need Initially	Multi-touch attribution, advanced AI proposal drafts
Retention Reason	Direct revenue impact, easy ROI math
Churn Risk	Market-specific compliance, payment processor coverage
Success Definition	Booking rate per inquiry up, no-show rate down

8. Market Strategy

8.1 Market Tier Framework

Tier	Markets	Strategy
Tier 1 (Build Now)	Coaches, EdTech, SaaS founders globally; agencies globally	Direct service-led acquisition + design partners
Tier 2 (Expansion)	Ecommerce globally; international local businesses in USA, UAE, UK, AU, CA, KSA, SG	Vertical templates after Tier 1 validation
Tier 3 (Defer)	Local businesses in India	Revisit only if validated as high-value market
Excluded	Local businesses in weak/no-good markets	Do not target

8.2 Local Business Market Logic

 **Strategic Rule** Local businesses are targeted **only outside India** and **only in markets where the economics are strong enough** to support revenue infrastructure services and software. Local businesses in weak markets are excluded.

8.2.1 Approved Initial Market Candidates

Country	Why It Qualifies	Status
USA	High purchasing power, mature digital lead gen, strong follow-up market	To Be Validated
UAE	High WTP, English-speaking, ad-driven local businesses	To Be Validated
UK	Mature SaaS adoption, strong digital lead gen	To Be Validated
Australia	Strong local SMB economy, English-speaking	To Be Validated
Canada	Adjacent to US market dynamics	To Be Validated
Saudi Arabia	Rising digital ad spend, WhatsApp-heavy	To Be Validated
Singapore	Mature digital economy, premium WTP	To Be Validated

 Final country prioritization is “To Be Validated” through market testing before each market is enabled in the platform.

8.3 Segment-by-Market Fit

Segment	India	USA	UAE	UK	AU	CA	KSA	SG
Coaches	✓	✓	✓	✓	✓	✓	✓	✓

Segment	India	USA	UAE	UK	AU	CA	KSA	SG
EdTech	✓	✓	●	✓	✓	✓	●	✓
SaaS Founders	✓	✓	✓	✓	✓	✓	●	✓
Ecommerce Owners	●	✓	✓	✓	✓	✓	✓	✓
Ecommerce Agencies	●	✓	✓	✓	✓	✓	●	✓
Local Businesses	✗	✓	✓	✓	✓	✓	✓	✓

Legend: ✓ Target ● Validate first ✗ Exclude

8.4 Product Variations by Geography

Variation Area	Implication
Payment processor	Razorpay/Cashfree (India), Stripe (USA, UK, AU, CA, SG), local processors (UAE, KSA) — <i>To Be Finalized</i>
Messaging channel mix	WhatsApp dominant in India/UAE/KSA/SG; email and SMS more dominant in USA/UK/AU/CA
Compliance	DPDP (India), GDPR (UK), CCPA (USA-CA), PDPA (SG), regional rules (UAE/KSA) — <i>To Be Finalized by legal</i>
Language	English MVP; regional languages future scope
Currency display	Locale-aware — future

8.5 Validation Required Before Market Expansion

Validation Item	Method
WTP at price points	Pilot pricing tests
Channel mix	Audit of 5–10 prospects per market
Integration coverage	Payment, calendar, messaging coverage check
Compliance readiness	Legal review per market
Support capacity	Timezone coverage feasibility

9. Product Positioning

9.1 Category

Vertical AI-Powered Revenue Operating System (Revenue OS)

Not a CRM. Not an automation tool. Not an attribution tool. Not a course platform. A **Revenue OS** is the operating system the entire revenue function of a business runs on.

9.2 One-Line Positioning Statement

InnovateX Revenue OS is the AI-powered revenue infrastructure that captures, qualifies, nurtures, books, converts, tracks, and retains customers — across every channel modern businesses sell on — for coaches, EdTech, SaaS, ecommerce, agencies, and high-value international local businesses.

9.3 Expanded Positioning Statement

For coaches, EdTech businesses, SaaS founders, ecommerce owners/agencies, and qualified international local businesses **who are losing revenue** because their lead capture, qualification, nurture, booking, follow-up, conversion, and attribution are scattered across spreadsheets, WhatsApp, calendars, ad managers, and the founder's memory, **InnovateX Revenue OS is the unified, AI-native, multi-channel revenue infrastructure platform** that installs a complete operating layer — unlike generic CRMs that are too horizontal, automation tools that are too narrow, and attribution tools like Hyros that track ads but not the full revenue journey.

9.4 Core Promise

“Capture every lead. Qualify without the founder. Convert with attribution clarity. Retain with automation. Run your entire revenue function on one platform.”

9.5 Differentiation Matrix

Dimension	Generic CRM (HubSpot/ Pipedrive)	Automation Tool (Zapier/Make)	Attribution Tool (Hyros)	InnovateX Revenue OS
Vertical depth	✗ Horizontal	✗ Horizontal	● Ads-focused	✓ Vertical templates
WhatsApp-native	✗	● Via integration	✗	✓ First-class
AI-native qualification	● Add-on	✗	✗	✓ Core
Full revenue journey tracking	● Partial	✗	● Ad-side only	✓ Source → retention
Service-led onboarding	✗	✗	✗	✓ Done-for-you wedge

Dimension	Generic CRM (HubSpot/ Pipedrive)	Automation Tool (Zapier/Make)	Attribution Tool (Hyros)	InnovateX Revenue OS
Call intelligence built-in	✗	✗	✗	✓
Multi-tenant for agencies	🟡 Enterprise tier	✗	✗	✓ Native
Vertical templates	✗	✗	✗	✓ Per ICP
Booking + nurture + payment unified	🟡 Add-ons	✗	✗	✓ Native

9.6 Why This Is Not Just Another CRM

CRM Limitation	InnovateX Solves
Built for SDR/AE motion, not founder-led sales	Built for founder-led, expert-driven sales
Adds AI as a feature, not a layer	AI is woven into qualification, nurture, calls
WhatsApp is an integration	WhatsApp is a first-class channel
Attribution is reporting-only	Attribution is end-to-end
Onboarding takes weeks	Done-for-you service wedge

9.7 Why This Is Not Just Another Automation Tool

Automation tools assume you have a system. **InnovateX provides the system.** Zapier moves data between tools. InnovateX **is** the tool.

9.8 Why This Is Not a Hyros Clone

Hyros Tracks	InnovateX Tracks
Ad-side attribution	Ad-side AND post-lead journey
Click to lead	Click → lead → qualification → nurture → booking → call → proposal → payment → retention
Ad spend ROAS	Source-to-customer-LTV
Designed for paid-ads-heavy businesses	Designed for the full revenue lifecycle of expert-led and digital businesses

Hyros is an attribution tool. InnovateX is a Revenue OS that includes attribution as one of many modules.

9.9 Why This Is Stronger Than Scattered Tools

A typical expert-led business uses: Calendly + Razorpay + Mailchimp + Google Sheets + WhatsApp + Notion + Meta Ads Manager + Otter + Zapier + a CRM. That's **10+ tools**, no unified data, no end-to-end visibility, and the founder as the integration layer.

InnovateX consolidates this into one platform with one data model, one timeline per lead, and one attribution view.

9.10 Positioning for Each ICP

ICP	Positioning Tagline
Coaches	"Capture every DM, qualify without you, book qualified calls — all on autopilot."
EdTech	"Run enrollment like a system, not a fire drill."
SaaS Founders	"Build your GTM pipeline before you hire your first SDR."
Ecommerce Owners	"Turn one-time buyers into lifetime customers — with attribution clarity."
Ecommerce Agencies	"Standardize delivery, automate reporting, retain every client."
Local Businesses (Intl.)	"Never lose another inquiry. Book every appointment. Track every dollar."

10. Core Problem Statement

Expert-led and digital businesses lose 30–60% of revenue potential **not because their offer is weak**, but because **revenue operations are fragmented**. The problem decomposes into 11 distinct dimensions:

10.1 Lead Capture Problem

Leads arrive across WhatsApp, Instagram DMs, Meta Lead Ads, website forms, referrals, and calls — but never land in one unified inbox with source attribution intact.

10.2 Qualification Problem

The founder is the bottleneck. Without a qualification layer, every lead — qualified or not — competes for the founder's attention, slowing down high-value conversations and burning out the team.

10.3 Follow-Up Problem

Manual WhatsApp follow-up is inconsistent. Sequences don't pause when status changes. Ghosted leads stay ghosted. There is no system, just willpower.

10.4 Booking Problem

Calendar links live separate from the CRM. Reminders don't fire. No-shows are not recovered. Source attribution of bookings is lost.

10.5 Sales Pipeline Problem

There is no shared visual pipeline. Deals live in the founder's head, in WhatsApp threads, or in scattered notes. Forecasting is guesswork.

10.6 Call Intelligence Problem

Calls happen, but notes don't. Objections aren't tracked. Follow-ups aren't drafted. Proposals get delayed because the call data has decayed.

10.7 Attribution Problem

"Where did this customer come from?" has no clean answer. UTMs are lost. WhatsApp leads have no source. Conversions aren't tied back to campaigns.

10.8 Reporting Problem

The founder either gets zero dashboards or 20 disconnected ones. Weekly/monthly review takes hours. Insights are not surfaced; they're hunted.

10.9 Automation Problem

Automations exist in Zapier or n8n, but they break silently. There's no central place to see what ran, what failed, and what's pending.

10.10 Founder Dependency Problem

Without the founder, lead qualification, follow-up, and decisions halt. The business cannot scale beyond the founder's bandwidth.

10.11 Service Delivery Scalability Problem (For Agencies)

Agencies serving multiple clients face the same chaos at 10x scale — every client has scattered tools, custom dashboards, and tribal knowledge. Standardization is impossible without a platform.

Core Insight

The problem is not a missing tool. The problem is the absence of an operating system that connects all the tools and workflows into a single, observable, intelligent revenue function.

11. Product Goals

11.1 Business Goals

Goal	Why It Matters	Success Metric	BRD Ref
Establish category leadership in "Revenue OS"	First-mover advantage in vertical revenue infrastructure	Top 3 mindshare in target ICPs within 24 months	OBJ-SW-001
Reduce manual service delivery time	Service margins improve; SaaS productization accelerates	40–60% reduction in service delivery hours per client	OBJ-SW-002
Build a data moat through anonymized benchmarks	Defensibility against horizontal players	Benchmark dataset across 200+ clients by Phase 5	OBJ-SW-008
Achieve hybrid revenue mix (services + SaaS)	Cash flow stability + scalable SaaS growth	60/40 services/SaaS by Phase 4; 30/70 by Phase 6	Business model

11.2 User Goals

Goal	Why It Matters	Success Metric
Capture every lead with source intact	Zero revenue leakage at top of funnel	95%+ source attribution on leads
Qualify without founder involvement	Founder time freed for high-leverage work	70%+ of leads qualified without founder
Book qualified meetings predictably	Predictable pipeline	Booking rate per qualified lead up 2x
See revenue clearly in one dashboard	Confident decision-making	Owner reviews dashboard weekly without help
Retain customers through automation	LTV uplift	Retention rate up 20–40%

11.3 Product Goals

Goal	Why It Matters	Success Metric	BRD Ref
Unified lead timeline	Single source of truth per lead	100% of touchpoints visible on timeline	SWBR-001
Multi-tenant isolation	SaaS trust and security	Zero cross-tenant data exposure	SWBR-005
Vertical template flexibility	Serve 6 ICPs with one platform	6 templates live with verticalized dashboards	SWBR-101
Modular, expandable architecture	Future-proof for ecosystem expansion	New modules deployable without core rewrites	SWBR-010

11.4 Technical Goals

Goal	Why It Matters	Success Metric	BRD Ref
Performance: <500ms p95 read	UX quality	p95 read latency <500ms	SWNFR-001
Scalability to 10K tenants	SaaS scale-out path	Load-tested per phase	SWNFR-005
Availability 99.5% → 99.9%	Trust as SaaS matures	Uptime measured per phase	SWNFR-006

Goal	Why It Matters	Success Metric	BRD Ref
Observability across AI, integrations, automation	Diagnose issues fast	All critical events logged	SWNFR-009

11.5 Operational Goals

Goal	Why It Matters	Success Metric
First value <4hrs (assisted), <2hrs (self-serve)	Activation drives retention	Activation event reached within target
Internal team uses the product daily	Dogfooding catches bugs	InnovateX operators on product daily
Support load <1 ticket per active tenant per month	Sustainable support cost	Support per tenant trend down

11.6 AI Goals

Goal	Why It Matters	Success Metric
AI qualification accuracy >85% match with human reviewer	Reduce founder bottleneck without quality loss	Match rate measured on sample
AI follow-up draft approval rate >70%	AI is useful, not a chore	Send-without-edit rate tracked
AI call summary captures objections + next steps reliably	Accelerate follow-up	Reviewer agreement >80%
AI hallucination rate <5% on critical fields	Safety	Hallucination QA reviews

11.7 Tracking Goals

Goal	Why It Matters	Success Metric
95%+ leads have source attribution	Attribution trust	% leads with source filled
Source-to-conversion reports reconcile	Owner trusts the data	Sample audit reconciliation pass rate
WhatsApp clicks fully tracked	Channel-specific attribution	WA link → lead match rate
Booking, call, payment events linked to source	Full-journey visibility	Coverage per event type

11.8 Service Delivery Goals

Goal	Why It Matters	Success Metric
40%+ reduction in client onboarding time	Service margin uplift	Time-to-go-live trend
QBR auto-generation	Operator retainer productivity	QBR prep time per client
Cross-client benchmark in operator console	Operator superpower	Benchmark adoption by ops team

12. Product Principles

Principles are non-negotiable. Every feature decision must be testable against them.

#	Principle	What It Means	Test Question
1	Revenue-first	Every feature must trace to revenue impact	"Does this directly improve capture, conversion, or retention?"
2	Tracking-first	Attribution is core, not optional	"Can we trace this back to source?"
3	Service-led, SaaS-scalable	Built from service evidence, designed to scale	"Has a service engagement proven this need?"
4	AI-assisted, not AI-hype	AI augments humans; doesn't replace judgment	"Does a human review high-stakes AI output?"
5	WhatsApp-first where relevant	WhatsApp is a first-class channel for relevant ICPs	"Does this support the way these users actually sell?"
6	Non-technical founder friendly	Coach or local business owner can use it	"Can a non-technical founder use this in 10 minutes?"
7	Modular and template-driven	One core platform, vertical playbooks	"Does this work across all ICPs via templates?"
8	Multi-tenant secure by design	Tenant isolation is non-negotiable	"Has cross-tenant access been tested?"
9	No unnecessary feature bloat	Vertical depth over horizontal breadth	"Are we building this just because competitors have it?"
10	Build only what improves revenue workflow, visibility, or delivery scalability	The ultimate filter	"Which of these three does this feature serve?"

13. User Roles and Permissions

13.1 Role Definitions

13.1.1 Super Admin (InnovateX Internal)

Attribute	Detail
Main Purpose	Manage the SaaS platform, support tenants, audit operations
Allowed Actions	Create/suspend tenants, audited impersonation, view system health, manage integrations health, support ticket triage
Restricted Actions	Cannot access tenant data without explicit support reason + audit log
Data Visibility	Cross-tenant metadata; tenant data only when authorized
Security Requirements	MFA mandatory, impersonation logged + time-limited, IP restriction recommended
Success Criteria	Tenant lifecycle managed cleanly, support resolved with audit trail

13.1.2 Tenant Owner

Attribute	Detail
Main Purpose	Own the workspace; oversee revenue system, team, settings, billing
Allowed Actions	All workspace actions, manage users, configure billing, view all data
Restricted Actions	Cannot view other tenants
Data Visibility	All data within own tenant
Security Requirements	MFA recommended; owner approval for critical settings changes
Success Criteria	Owner runs the revenue function confidently

13.1.3 Tenant Admin

Attribute	Detail
Main Purpose	Operational lead — configure workflows, manage users, run reports
Allowed Actions	Configure CRM, sequences, integrations, qualification, scoring; manage users (per Owner grant); view dashboards
Restricted Actions	No billing access unless explicitly granted; no super admin actions
Data Visibility	All tenant operational data
Security Requirements	RBAC, activity logs
Success Criteria	Workflows operate without founder intervention

13.1.4 Sales User

Attribute	Detail
Main Purpose	Work assigned leads, calls, follow-ups, deals

Attribute	Detail
Allowed Actions	View/edit assigned leads, deals, tasks; create proposals; send messages
Restricted Actions	No admin settings, no security settings, no user management
Data Visibility	Assigned records (or all sales records per configuration)
Security Requirements	Action logging
Success Criteria	Leads worked and updated systematically

13.1.5 Read-Only User / VA

Attribute	Detail
Main Purpose	View dashboards and records; assist without modify access
Allowed Actions	View dashboards, records, reports (scoped)
Restricted Actions	No edit, no delete; export may be restricted (To Be Finalized)
Data Visibility	View-only scoped data
Security Requirements	Export controls
Success Criteria	Stakeholders/VAs informed without risk

13.1.6 End Lead

Attribute	Detail
Main Purpose	Interact with the business (form, chat, booking, payment)
Allowed Actions	Submit info, chat (WhatsApp/web), book a slot, complete payment
Restricted Actions	No workspace access; never sees other leads
Data Visibility	Only their own interaction context
Security Requirements	Consent collection, opt-out respected, privacy enforced
Success Criteria	Fast qualification and booking experience

13.2 RBAC Matrix

Capability	Super Admin	Tenant Owner	Tenant Admin	Sales User	Read-Only	End Lead
Create/Suspend Tenant	✓	✗	✗	✗	✗	✗
Impersonate Tenant (Audited)	✓	✗	✗	✗	✗	✗
Manage Billing	● Support	✓	● Granted	✗	✗	✗
Invite/Manage Users	● Support	✓	✓	✗	✗	✗
Configure Integrations	● Support	✓	✓	✗	✗	✗

Capability	Super Admin	Tenant Owner	Tenant Admin	Sales User	Read-Only	End Lead
Configure Pipeline/ Sequences	✗	✓	✓	✗	✗	✗
View All Leads in Tenant	✗	✓	✓	● Assigned	✓ View-only	✗
Edit Leads/Deals	✗	✓	✓	✓	✗	✗
Send Messages	✗	✓	✓	✓	✗	✗
Create Proposals/ Payment Links	✗	✓	✓	✓	✗	✗
View Dashboards	✓ Cross	✓	✓	● Limited	✓ Scoped	✗
View Audit Logs	✓	✓	● Limited	✗	✗	✗
Export Data	●	✓	● Granted	✗	✗	✗

Legend: ✓ Allowed ● Conditional ✗ Denied

14. User Personas

14.1 Persona 1 — “Priya the Non-Technical Coach Founder”

Attribute	Detail
Role	Solo coach / 1–3 person team
Business Context	Sells coaching cohorts and 1:1 packages; runs Meta + Instagram ads; closes via WhatsApp
Goals	More booked qualified calls; less time on unqualified leads; clarity on what's working
Pain Points	Misses DMs, can't track ad source, no system for follow-up
Current Workflow	DMs on Instagram → WhatsApp → manual qualification → Calendly link → Razorpay → repeat
Current Tools	WhatsApp, Instagram, Calendly, Google Sheets, Razorpay
What They Need	One inbox, AI qualification, calendar booking, payment, attribution
First Value Moment	First AI-qualified lead lands in their inbox with a booked call
What Makes Them Pay	Seeing 2x more qualified booked calls in first 30 days
What Makes Them Churn	Setup friction, WhatsApp violations, AI quality issues
Success Metric	Qualified bookings per week up 2x

14.2 Persona 2 — “Rohan the EdTech Enrollment Operator”

Attribute	Detail
Role	Head of Enrollment / VP Growth
Business Context	EdTech with quarterly cohorts; runs webinars → counselor outreach → enrollment
Goals	Each cohort fills predictably without firefighting
Pain Points	Webinar leads flood in; counselors drop balls; founder firefights every launch
Current Workflow	Webinar platform → CSV → spreadsheet → counselor WhatsApp groups → manual tracking
Current Tools	Zoom, Google Sheets, WhatsApp, LMS, ad-hoc CRM
What They Need	Webinar lead capture, counselor pipeline, enrollment dashboard, payment follow-up
First Value Moment	First cohort run with counselor pipeline visible in real time
What Makes Them Pay	Reduction in counselor follow-up gaps; enrollment rate uplift
What Makes Them Churn	LMS integration depth, counselor adoption resistance
Success Metric	Enrollment-per-lead up 20%+; founder time per cohort down 50%

14.3 Persona 3 — “Aarav the SaaS Founder”

Attribute	Detail
Role	Founder/CEO of an early SaaS startup
Business Context	\$10K–\$100K MRR; doing founder-led demos; small team
Goals	Build a predictable demo-to-customer pipeline before hiring SDRs
Pain Points	Demo no-shows, post-demo follow-up gaps, no pipeline clarity, scattered data
Current Workflow	Inbound demo → Calendly → demo → Notion notes → manual follow-up → Stripe
Current Tools	HubSpot Free, Calendly, Notion, Stripe, Linear
What They Need	Demo qualification, booking, post-demo follow-up automation, pipeline, attribution
First Value Moment	First week with a clean demo pipeline view
What Makes Them Pay	Demo-to-customer cycle reduction visible in dashboard
What Makes Them Churn	Comparison with mature CRMs, missing power-user features
Success Metric	Demo conversion up; founder time per deal down

14.4 Persona 4 — “Maya the Ecommerce Owner”

Attribute	Detail
Role	DTC brand founder
Business Context	Shopify store, \$50K–\$300K monthly GMV; runs Meta ads
Goals	Higher LTV, cart recovery, retention automation, attribution
Pain Points	iOS 14 attribution loss, abandoned carts, no retention flows
Current Workflow	Shopify → Klaviyo (broken email) → Meta Ads → ad-hoc WhatsApp
Current Tools	Shopify, Klaviyo, Meta Ads, WhatsApp Business
What They Need	Customer lifecycle automation, cart recovery, retention, campaign attribution
First Value Moment	First recovered cart via WhatsApp + email sequence
What Makes Them Pay	LTV uplift visible in dashboard
What Makes Them Churn	Shallow Shopify integration, Klaviyo-native alternative
Success Metric	Repeat purchase rate up; LTV trend up

14.5 Persona 5 — “Sameer the Ecommerce Agency Operator”

Attribute	Detail
Role	Head of Client Success / Founder of agency
Business Context	Agency serving 10–30 ecommerce brands
Goals	Standardize delivery, automate reporting, retain clients

Attribute	Detail
Pain Points	Inconsistent delivery per client, hours spent on reporting, retention risk
Current Workflow	Per-client Notion + Looker + ClickUp + Slack — chaos
Current Tools	Triple Whale, Klaviyo, ClickUp, Slack, Looker Studio
What They Need	Multi-client workspaces, client health, QBR auto-gen, retention alerts
First Value Moment	First QBR auto-generated for a client
What Makes Them Pay	Hours saved per week + retention uplift
What Makes Them Churn	White-label gap, missing integrations
Success Metric	Hours per client down; client retention up

14.6 Persona 6 — “Dr. Khan, International Local Business Owner (UAE)”

Attribute	Detail
Role	Owner of a medical/dental/wellness practice
Business Context	1–3 location practice in UAE/UK/USA
Goals	Capture every inquiry, book every qualified one, no-show recovery
Pain Points	Missed calls, slow response, no source tracking, no-shows
Current Workflow	Google Ads → calls → manual booking → SMS reminders
Current Tools	Google My Business, phone, paper diary, ad-hoc CRM
What They Need	Inquiry inbox, instant response, appointment booking, reminders, review automation
First Value Moment	First week with zero missed inquiries
What Makes Them Pay	Booking rate uplift, no-show reduction
What Makes Them Churn	Compliance gaps, language gaps, payment processor coverage
Success Metric	Bookings per inquiry up; no-show rate down

14.7 Persona 7 — “Neha the Sales User”

Attribute	Detail
Role	Sales/counselor on the tenant's team
Business Context	Works leads assigned by the system
Goals	Clear task list, lead context, fast follow-up, easy stage movement
Pain Points	Manual data entry, scattered context, slow CRMs
What They Need	Lead timeline, AI draft follow-ups, fast Kanban, clear tasks
First Value Moment	First day with auto-generated follow-up drafts
What Makes Them Stay	Less admin work, more selling
Success Metric	Touchpoints per day up; admin time down

14.8 Persona 8 — “Raj the Tenant Admin”

Attribute	Detail
Role	Ops lead / RevOps for the tenant business
Business Context	Configures and operates the platform on behalf of the owner
Goals	Smooth workflows, clean data, accurate reports
Pain Points	Tool sprawl, broken automations, training new sales hires
What They Need	Configurable workflows, integration health, audit logs, training material
First Value Moment	First automated workflow runs end-to-end without issue
What Makes Them Stay	Reliable platform, responsive support
Success Metric	Automation success rate; user adoption

14.9 Persona 9 — “Kavya the InnovateX Super Admin”

Attribute	Detail
Role	InnovateX internal platform operator
Business Context	Manages tenants across InnovateX’s service + SaaS book
Goals	Smooth tenant operations, fast support, secure impersonation
Pain Points	Cross-client context switching, security risk on impersonation
What They Need	Tenant lifecycle controls, integration health dashboard, audit logs
First Value Moment	First support resolution with clean audit trail
What Makes Them Stay	Tooling that makes support fast and safe
Success Metric	Time-to-resolve down; security incidents = 0

15. Jobs To Be Done

15.1 Functional Jobs

“When I am trying to capture leads from multiple channels, I want them all to land in one inbox with source attribution intact, so I can see and act on every lead without losing context.”

“When I am trying to qualify inbound leads, I want AI to ask the qualification questions for me, so I only spend my time on high-fit prospects.”

“When I am trying to follow up at scale, I want sequences that pause when status changes and personalize per lead, so I never lose a warm lead to ghosting.”

“When I am trying to book qualified meetings, I want the booking page to be sent automatically post-qualification, so qualified leads convert to calls without manual handoff.”

“When I am trying to take notes on calls, I want AI to summarize them and draft follow-ups, so I can close faster without losing call data.”

15.2 Emotional Jobs

“When I check my business dashboard, I want to feel confident — not anxious — that I know what’s working.”

“When my team is following up with leads, I want to trust that nothing is falling through the cracks.”

“When I review my week, I want to feel like I made progress, not chaos.”

15.3 Revenue Jobs

“When I look at my pipeline, I want to forecast revenue confidently for the next 30 days.”

“When I run an ad campaign, I want to see source-to-customer revenue, not just clicks.”

“When a customer pays, I want the system to know automatically and update everything.”

15.4 Team Collaboration Jobs

“When I assign a lead to a sales user, I want the full context to travel with the lead.”

“When my team updates a deal, I want to see it without asking them.”

“When a counselor goes on leave, I want the leads to route to backup automatically.”

15.5 Reporting Jobs

“When my weekly review starts, I want a summary of pipeline health delivered on WhatsApp.”

“When a campaign ends, I want a campaign-to-revenue report ready without manual work.”

“When the quarter ends, I want a QBR for each client auto-generated.”

15.6 Automation Jobs

“When a lead becomes ghosted, I want a reactivation sequence to trigger automatically.”

“When a payment is captured, I want the deal to move to Won automatically.”

“When an integration fails, I want to be alerted before it impacts revenue.”

16. User Journeys

16.1 End Lead Journey (The Customer)

Stage	User Action	System Action	AI/Auto	Tracking Event
Discovery	Clicks ad/content	Captures UTM/source	—	source_link_clicked
Capture	Submits form / starts WA chat	Creates lead, dedupe	—	lead_created
Qualification	Answers AI chat	Generates score, route	AI	ai_qualification_completed , lead_scored
Routing	(Passive)	Routes to booking/nurture	Auto	lead_routed
Booking	Books slot	Confirms, sends reminders	Auto	booking_created
Call	Attends call	Records, transcribes	AI summary post-call	call_completed , call_summary_generated
Follow-up	Receives draft msg	Sales user approves+sends	AI draft	followup_drafted
Proposal	Reviews proposal	Sales user generates	AI draft	proposal_created
Payment	Pays	Webhook updates deal	Auto	payment_completed , deal_won

Value Moment: Within 10 minutes of clicking the ad, the lead is qualified and booked.

Failure Points: WA delivery failure, AI misqualification, calendar sync delay.

Success Criteria: End-to-end journey under 24 hours from click to call.

16.2 Coach Owner Journey

Stage	Action	System Response
Login	Opens dashboard	Shows pipeline + weekly briefing

Stage	Action	System Response
Review	Sees qualified leads	Filters by source/score
Approve	Approves drafted follow-ups	Sends + logs
Inspect	Drills into a deal	Shows full timeline
Optimize	Sees attribution	Pauses underperforming source

16.3 EdTech Operator Journey

Stage	Action	System Response
Cohort start	Imports webinar leads	Auto-qualifies, routes to counselors
Mid-cohort	Reviews counselor performance	Dashboard shows leakage
Pre-close	Sends payment follow-ups	Auto-sequences run
Post-close	Reviews enrollment attribution	Cohort dashboard

16.4 SaaS Founder Journey

Stage	Action	System Response
New inbound	Demo request comes in	AI qualifies
Pre-demo	Reviews lead context	Timeline + briefing
Demo	Conducts call	AI summary post-call
Follow-up	AI drafts post-demo email	Approve + send
Close	Generates proposal + payment link	Razorpay/Stripe

16.5 Ecommerce Owner Journey

Stage	Action	System Response
Campaign launch	Connects Meta Ads	Source tracking on
Cart abandoned	(Passive)	Recovery sequence fires
Purchase	Customer buys	Lifecycle event logged
Post-purchase	(Passive)	Cross-sell/upsell sequence
Retention	Reviews LTV dashboard	Campaign attribution

16.6 Ecommerce Agency Journey

Stage	Action	System Response
Client onboard	Creates client workspace	Template applied
Weekly	Reviews client health	Health score dashboard
QBR	Generates QBR	Auto-assembled report
Renewal	Reviews retention risk	Risk alerts

16.7 Local Business Owner Journey (Future)

Stage	Action	System Response
Inquiry comes in	(Passive)	Instant auto-response
Qualification	AI/staff confirms intent	Routes to booking
Booking	Customer books	Reminders fire
Visit	Customer attends	No-show recovery if missed
Review/Referral	Post-visit	Auto-request review

16.8 Sales User Journey

flowchart LR

style D fill:#0EA5E9,stroke:#06B6D4,color:#fff

style G fill:#10B981,stroke:#06B6D4,color:#fff

16.9 Tenant Admin Journey

Stage	Action	System Response
Setup	Configures sequences	Saved + activated
Monitor	Checks integration health	Status dashboard
Optimize	Reviews automation logs	Adjusts triggers
Support	Helps team members	Audit trail intact

16.10 Super Admin Journey

Stage	Action	System Response
Tenant create	Creates new tenant	Tenant provisioned
Health check	Reviews all-tenant health	Cross-tenant dashboard
Support	Impersonates with reason	Audit log created
Compliance	Reviews audit logs	Searchable trail

17. Product Scope

17.1 Scope Framework

Scope Layer	Purpose	Status
MVP Scope	Validate the Revenue OS concept with design partners	Build now
V1 Scope	Post-MVP enhancements based on validation	Build after MVP launch
V2 Scope	Vertical and feature expansion	Build after public beta
Future Scope	Ecosystem, white-label, advanced AI	Phase 5+
Out of Scope	Will not build	Permanent exclusions

17.2 MVP Scope

Module	In MVP
Tenant setup + multi-tenancy	✓
User roles + RBAC	✓
Lead capture (form, WA, Meta Ads)	✓
UTM + source tracking	✓
WhatsApp lead capture + click tracking	✓
AI qualification chat	✓
Lead scoring (rule + AI hybrid)	✓
CRM / pipeline Kanban	✓
Lead detail timeline	✓
Basic nurture sequences	✓
Calendar booking (Cal.com / Calendly)	✓
Call intelligence (basic — import + summary)	✓
Payment link + status (Razorpay/Cashfree)	✓
Attribution dashboard (basic)	✓
Owner dashboard	✓
Admin / multi-tenancy	✓
Notifications (WA, email, in-app)	✓
Basic integrations	✓
Audit logs	✓
Vertical templates (Coach, EdTech first)	✓

17.3 V1 Scope (Post-MVP)

Module	In V1
Self-serve onboarding (semi)	✓
Advanced nurture (branching, A/B)	✓
Call intelligence — full (transcript + objection tagging)	✓
AI follow-up drafts	✓
AI proposal drafts	✓
Weekly briefing (AI-generated)	✓
Ghosted lead reactivation	✓
Campaign performance dashboard	✓
SaaS GTM template	✓
Ecommerce template	✓
Agency template	✓
Support ticketing	✓
Knowledge base	✓

17.4 V2 Scope

Module	In V2
Full self-serve onboarding	✓
Multi-touch attribution	✓
Pixel/event script for websites	✓
HubSpot two-way sync	✓
Course platform webhooks (Graphy/Kajabi/Spayee)	✓
Google Ads attribution	✓
Local business template (gated by market)	✓
Advanced segmentation	✓
AI anomaly detection	✓
Benchmark dashboard	✓

17.5 Future Scope

Module	Future
Server-side conversion events (Meta CAPI, Google Offline Conv)	✓
Public API	✓
White-label	✓
Mobile app (native)	✓

Module	Future
Regional language support	✓
AI sales coach	✓
Partner marketplace	✓
Enterprise SLA tier	✓

17.6 Explicitly Out of Scope

Out of Scope	Why
Full ad management platform	Ads belong in Meta/Google Ads native
Course/LMS platform	Not our category
Full accounting / books	Not our category
General marketplace	Not our category
Generic horizontal CRM	We are vertical
Hyros-grade ad attribution	We track post-lead journey deeper
Project management tool	Not our category
Email service provider (deep)	We use SendGrid/Postmark

18. MVP Definition

18.1 MVP Objective

Prove that an Indian/international expert-led, digital, or qualified local business with inbound demand can run their entire revenue function — from capture to conversion — on InnovateX Revenue OS, with measurable revenue uplift and reduced founder dependency.

18.2 MVP Target Users

Priority	Segment	Why First
P0	Coaches	Highest pain, fastest validation, simplest workflow
P0	EdTech (small/mid)	High WTP, repeat workflow per cohort
P1	SaaS founders	Adjacent ICP, validates founder-led sales motion

18.3 MVP Primary Use Case

A coach with inbound leads from Meta Ads + Instagram DMs configures the platform, connects WhatsApp + Calendar + Razorpay, and within 4 hours has: - Lead capture live across form + WhatsApp + Meta Ads - AI qualification asking 5 configured questions - Lead scoring and routing to booking - Calendar booking with reminders - Pipeline Kanban - Attribution dashboard showing source-to-booking - Payment link generation

18.4 MVP Must-Have Modules

Module	Reason
Lead Capture	No leads = no system
Multi-tenancy + RBAC	SaaS foundation
AI Qualification	Core differentiator
CRM Pipeline	Operational source of truth
Calendar Booking	Conversion mechanism
Basic Nurture	Follow-up automation
Payment Link + Status	Conversion attribution
Attribution Dashboard	Visibility
Audit Logs	Trust + security

18.5 MVP Must-Have Workflows

1. Source link clicked → Lead created with UTM

- 2. WhatsApp clicked → Lead created with source
- 3. Meta Lead Ad submitted → Lead synced with campaign data
- 4. Lead created → AI qualification triggered
- 5. AI qualification complete → Score generated → Lead routed
- 6. Hot lead → Booking link sent → Booking created
- 7. Cold/Mid lead → Nurture sequence started
- 8. Booking attended → Call summary generated
- 9. Sales user → Sends follow-up → Generates payment link
- 10. Payment captured → Deal moves to Won → Attribution updated

18.6 MVP Activation Event

“First lead captured + first AI qualification completed + first booking created” — typically within first 24 hours of assisted setup.

18.7 MVP Success Metrics

Metric	Target
Time to activation	<4 hours assisted, <24 hours self-paced
% of design partners activating	>80%
Leads captured per tenant per week	>50 (variable by ICP)
% leads AI-qualified without founder	>70%
Booking-per-qualified-lead rate	Up 1.5–2x vs baseline
Tenant week-1 retention	>90%
Critical bugs in production	<5 per week

18.8 MVP Launch Criteria

Gate	Requirement
Security	Tenant isolation tested, MFA available, audit logs complete
Compliance	DPDP basics + WhatsApp policy compliance
Reliability	99% uptime over 14-day pilot
Performance	p95 read <500ms, p95 write <2s
Onboarding	Assisted onboarding playbook documented
QA	All P0 acceptance criteria met

18.9 MVP Validation Criteria

Validation	Method
Revenue impact	Pre/post pipeline conversion measurement

Validation	Method
Time saved	Founder time per week tracked
AI quality	Human review pass rate on qualification + summaries
Trust	Owner reviews dashboard without help by week 2
Retention signal	Tenant continues active use beyond 30 days

18.10 MVP Exclusions (Will NOT Build in MVP)

Excluded	Reason
Multi-touch attribution	V2
Pixel tracking script	Future
Server-side conversion API	Future
AI sales coach	Future
White-label	Future
Public API	Future
Mobile app	Future
Regional language support	Future
Full self-serve onboarding	V1
HubSpot two-way sync	V2
Local business template	Until market validated

18.11 MVP Risks

Risk	Mitigation
Overbuild attempt	MVP scope is locked; new requests go to V1 backlog
AI quality issues	Confidence gating + human review
WhatsApp policy	Channel abstraction + email fallback
Engineering velocity	Narrow scope + design partner discipline
Onboarding friction	Assisted (not self-serve) for MVP

18.12 MVP Dependency Checklist

- ☐ CTO/Engineering Lead onboarded — *To Be Finalized*
- ☐ WhatsApp Business API access (WATI/Wablas)
- ☐ Meta Lead Ads OAuth approval
- ☐ Cal.com/Calendly partnership
- ☐ Razorpay/Cashfree account
- ☐

- ☐ Claude/OpenAI API
 - ☐ Supabase/Postgres setup
 - ☐ Pinecone (or alternative) for AI context
 - ☐ 3+ design partner commitments
 - ☐ Legal review for DPDP + WhatsApp policy — *To Be Finalized*
-

19. Core Product Modules

The product is organized into 16 modules, layered as **Data Capture** → **Intelligence** → **Workflow** → **Visibility** → **Platform Control**.

19.1 Module 1 — Lead Capture

Field	Detail
Purpose	Capture inbound demand from forms, WhatsApp, Meta Lead Ads, manual entry into one tenant inbox
Target Users	Tenant Owner, Admin, Sales User
User Problem Solved	Zero leads lost between source and CRM
Key Features	Embeddable forms, WhatsApp click-to-chat, Meta Lead Ads sync, manual entry, dedupe, source tagging
Functional Requirements	Lead form builder; WA link generator; Meta OAuth; webhook receiver; dedupe logic
Data Requirements	Lead entity with source, UTM, campaign, channel, timestamp, consent

Field	Detail
Automation	Auto-create lead → auto-notify owner → trigger qualification
AI	None at this layer
Integrations	WhatsApp BSP, Meta, web forms
Edge Cases	Duplicate submissions, webhook retries, missing UTMs
Acceptance Criteria	Lead lands in correct tenant within 30s, source preserved, dedupe applied
MVP Scope	Form + WA + Meta + manual
Future Enhancements	LinkedIn extension, ad-platform deep sync
Risks	Source attribution gaps, duplicate leads

19.2 Module 2 — AI Qualification

Field	Detail
Purpose	Qualify leads conversationally and generate fit score + recommended action
Target Users	End Lead, Sales User, Owner
User Problem Solved	Founder bottleneck on qualification
Key Features	Configurable qualification flows, conversational AI chat, score generation, human handoff queue
Functional Requirements	Question builder; AI chat interface; scoring engine; handoff rules
Data Requirements	Qualification record (responses, score, confidence, route, transcript)
Automation	Auto-start on lead creation; auto-route post-completion
AI	LLM-driven conversational qualification; confidence-gated routing
Integrations	Claude/OpenAI; Pinecone for context
Edge Cases	Multi-language responses, off-topic chats, abusive content
Acceptance Criteria	Conversation captures required answers, score stored, low-confidence routes to human
MVP Scope	Configurable Q&A flow + score + route
Future Enhancements	Multi-language, voice input, vertical-specific personalities
Risks	Hallucination, misqualification, privacy of conversation data

19.3 Module 3 — Lead Scoring

Field	Detail
Purpose	Generate 1–10 fit score using rules + AI
Target Users	Sales User, Owner
User Problem Solved	Prioritize attention on high-fit leads
Key Features	Rule engine, AI reasoning, manual override, score explanation

Field	Detail
Functional Requirements	Score calculation, audit trail, override logging
Data Requirements	Score, score reason, override history, confidence
AI	Hybrid: rules + AI reasoning
Acceptance Criteria	Score is stored, explainable, override logged
MVP Scope	Hybrid scoring with explanation
Future Enhancements	Predictive scoring from historical data
Risks	Bias, drift, over-reliance

19.4 Module 4 — Nurture Engine

Field	Detail
Purpose	Automate WhatsApp/email/SMS follow-up sequences
Target Users	Admin, Sales User
User Problem Solved	Inconsistent follow-up; ghosted leads
Key Features	Sequence builder, templates, segment-based routing, status-based pause, opt-out enforcement
Functional Requirements	Step scheduler, template engine, reply detection, pause logic
Data Requirements	Sequence, step, template, channel, status, send log
Automation	Status-change triggers, opt-out respect, branching
AI	AI personalization (V1)
Integrations	WhatsApp BSP, SendGrid/Postmark
Edge Cases	WA template policy, out-of-window messages, unsubscribes
Acceptance Criteria	Sequences send, pause on status change, respect opt-out
MVP Scope	Linear sequences with pause logic
Future Enhancements	A/B testing, branching, AI-personalized drafts
Risks	WhatsApp policy violation, spam reports

19.5 Module 5 — Calendar Booking

Field	Detail
Purpose	Route qualified leads to bookable meetings
Target Users	End Lead, Sales User
User Problem Solved	Conversion gap between qualified and booked
Key Features	Calendar integration (Cal.com/Calendly), routing rules, reminders, reschedule handling
Functional Requirements	OAuth, availability query, booking write-back, reminder scheduling
Data Requirements	Booking entity with provider, slot, status
Automation	Post-qualification routing, reminders, no-show recovery

Field	Detail
Integrations	Cal.com, Calendly
Edge Cases	Time zone confusion, double booking, cancellation
Acceptance Criteria	Qualified lead receives correct link; booking event stored; reminders fire
MVP Scope	Single provider, basic routing
Future Enhancements	Round-robin, multi-rep routing, native calendar
Risks	Calendar sync failure, time zone bugs

19.6 Module 6 — Call Intelligence

Field	Detail
Purpose	Import calls, transcribe, summarize, draft follow-ups
Target Users	Sales User, Owner
User Problem Solved	Lost call data; slow follow-up
Key Features	Call import/link, transcription, AI summary, objection tagging, follow-up draft
Functional Requirements	Recording attach, transcript fetch, summary generation, action items
Data Requirements	Call record (audio/link, transcript, summary, objections, next steps)
AI	Transcription + summarization + objection extraction
Integrations	Fathom, Otter, Zoom
Edge Cases	Multi-language calls, low-quality audio, missed calls
Acceptance Criteria	Recording attached to lead/deal; summary editable; tasks created
MVP Scope	Manual import + AI summary
Future Enhancements	Auto-import, real-time coaching, objection benchmarking
Risks	Transcription accuracy, privacy/consent

19.7 Module 7 — CRM / Pipeline

Field	Detail
Purpose	Operational source of truth for leads, deals, tasks, stages
Target Users	Sales User, Admin, Owner
User Problem Solved	Scattered deal data; no shared pipeline view
Key Features	Pipeline Kanban, lead detail timeline, deal detail, tasks, activity log
Functional Requirements	Drag-drop stage movement, timeline aggregation, task scheduler
Data Requirements	Lead, deal, task, stage, owner, activity
Automation	Stage-change triggers, task reminders
AI	None at module level (used in feeders)
Acceptance Criteria	Stage changes persist; activity log updates; permissions enforced

Field	Detail
MVP Scope	Kanban + lead detail + tasks
Future Enhancements	Custom stage rules, deal scoring, predictive close dates
Risks	Adoption resistance, stage hygiene

19.8 Module 8 — Attribution & Tracking Engine

[See Section 21 for full module specification]

19.9 Module 9 — Analytics & Reporting

Field	Detail
Purpose	Show what's working; deliver weekly insights
Target Users	Owner, Admin, Super Admin
User Problem Solved	Lack of revenue visibility
Key Features	Dashboards, source-to-revenue funnel, weekly briefing, exportable reports
Data Requirements	All entities for aggregation
AI	AI-generated weekly briefing
Acceptance Criteria	Dashboards reconcile with sample data; weekly briefing delivers on time
MVP Scope	Owner dashboard, pipeline, attribution basic, weekly briefing
Future Enhancements	Benchmark dashboard, custom report builder

19.10 Module 10 — Payments

Field	Detail
Purpose	Generate payment links, update deal status on capture
Target Users	Sales User, Owner
User Problem Solved	Manual reconciliation between payment and deal
Key Features	Payment link creation, status webhook, deal auto-update
Integrations	Razorpay, Cashfree (India); Stripe (international) — <i>To Be Finalized</i>
Acceptance Criteria	Payment link generated; webhook updates deal Won
MVP Scope	Razorpay + Cashfree
Future Enhancements	International processor coverage, subscription billing

19.11 Module 11 — Notifications

Field	Detail
Purpose	Alert users to lead, booking, task, automation, support events

Field	Detail
Target Users	All users
Channels	WhatsApp, email, in-app
Acceptance Criteria	Notifications respect preferences and opt-outs
MVP Scope	Lead, booking, task, payment, integration failure alerts
Future Enhancements	Push notifications, mobile native

19.12 Module 12 — Admin / Multi-Tenancy

Field	Detail
Purpose	Securely manage tenants, users, roles, integrations
Target Users	Super Admin, Owner, Admin
Key Features	Tenant lifecycle, user management, role config, audit logs, impersonation
Acceptance Criteria	Tenant isolation enforced; impersonation logged
MVP Scope	Full module — non-negotiable for SaaS

19.13 Module 13 — Integrations

Field	Detail
Purpose	Connect third-party services
MVP Scope	WhatsApp BSP, Meta Lead Ads, Cal.com/Calendly, Razorpay/Cashfree, Fathom/Otter/Zoom, Claude/OpenAI, Pinecone, SendGrid/Postmark, Supabase
Future	HubSpot, Apollo, Google Ads, course platforms, n8n/Zapier/Pabbly

19.14 Module 14 — Support / Knowledge Base

Field	Detail
Purpose	In-app help; ticketing; KB articles
Target Users	All tenant users
MVP Scope	Basic ticket creation + KB read
Future Enhancements	AI support bot, severity routing, SLAs

19.15 Module 15 — Template Management

Field	Detail
Purpose	Manage vertical templates, sequences, prompts, proposals
Target Users	Admin, Super Admin
Acceptance Criteria	Templates versioned and tenant-scoped

Field	Detail
MVP Scope	Vertical templates for Coach + EdTech

19.16 Module 16 — Onboarding

Field	Detail
Purpose	Get tenant from signup to first value
MVP Mode	Assisted onboarding (InnovateX team-led)
V1 Mode	Semi-self-serve with checklists
Future Mode	Full self-serve
Activation Event	First lead + first qualification + first booking

20. Detailed Feature Requirements

20.1 Feature Requirements Matrix

Feature ID	Feature Name	Description	Priority	Target User	Problem Solved	Functional Requirements	Dependencies	Data Required	Acceptance Criteria	Success Metric	Risks
F-001	Lead Form Builder	Drag-drop embeddable lead form builder	P0	Admin	Capture form leads	Field types, validation, embed code, source tag	Lead schema	Form config, embed code	Form creates lead in <5s	Forms created per tenant	Form spam
F-002	UTM Capture	Capture & persist UTMs across the journey	P0	Owner/Admin	Source attribution	URL parser, persistence to lead	Tracking module	UTM fields on lead	UTM visible in lead detail + reports	% leads with UTM	Strip on redirect
F-003	WhatsApp Click Tracking Links	Source-specific WA links	P0	Admin/Marketing	Track WA-sourced leads	Link generator, redirect, source attribution	Link service	source/campaign metadata	Each link creates trackable lead	WA leads attributed	Long URLs broken
F-004	WhatsApp Lead Capture	Create lead from WA chat	P0	End Lead/Owner	Capture WA leads	WA webhook receiver, lead match/create	WhatsApp BSP	WA conversation, lead	New chat creates lead	WA capture rate	BSP downtime
F-005	Meta Lead Ads Sync	OAuth sync of Meta Lead Ads	P0	Admin	Capture FB/IG ad leads	OAuth, webhook, field mapping	Meta API	Lead + UTM + campaign	Leads sync <60s, UTM preserved	Sync success rate	OAuth expiry
F-006	AI Qualification Chat	Conversational AI qualification	P0	End Lead	Founder bottleneck	LLM chat, configurable Qs	Claude/OpenAI	Qualification record	Required fields captured, score generated	% auto-qualified	Hallucination
F-007	Question Builder	Configure qualification questions per template	P0	Admin	Vertical fit	UI for questions, ordering, branching	Qualification module	Question schema	Questions saved/versioned	Question completion rate	Bad question design

Feature ID	Feature Name	Description	Priority	Target User	Problem Solved	Functional Requirements	Dependencies	Data Required	Acceptance Criteria	Success Metric	Risks
F-008	Lead Scoring (Hybrid)	Rule + AI scoring	P0	Sales/ Owner	Prioritize attention	Rule engine + LLM reasoning	AI + rules	Score, reason, confidence	Score is explainable, override logged	Score accuracy	Bias
F-009	Lead Routing	Route by score/ segment/ availability	P0	Sales/ Admin	Right rep, right lead	Rule engine, assignment logic	Scoring	Routing rules	Hot → booking, others → nurture	Routing accuracy	Rule misconfig
F-010	Pipeline Kanban	Drag-drop deal pipeline	P0	Sales/ Owner	Pipeline visibility	Kanban UI, stage persistence	CRM	Deal, stage	Stage change persists; log created	Pipeline adoption	Stage hygiene
F-011	Lead Detail Timeline	Unified timeline of all touchpoints	P0	Sales	Lead context	Aggregator, timeline UI	All entities	All events	Timeline shows all touchpoints chronologically	Time-on-lead	Performance
F-012	Calendar Booking	Cal.com/ Calendly booking	P0	End Lead/ Sales	Booking conversion	OAuth, availability, reminders	Cal/ Calendly	Booking	Qualified lead books; CRM updates	Booking conversion	Calendar sync fail
F-013	Basic Nurture Sequence	Linear nurture across channels	P0	Admin	Follow-up automation	Step scheduler, template render	WA/ email	Sequence, message	Sequence runs, pauses on status change	Engagement rate	Spam
F-014	Call Recording Import	Attach calls to lead/deal	P0	Sales	Lost call data	File/URL upload + match	Call module	Call entity	Recording attached to lead	Recordings attached %	Storage
F-015	AI Call Summary	Summarize calls, extract action items	P0	Sales	Slow follow-up	Transcription + LLM summarization	LLM	Summary, objections, next steps	Summary editable, tasks created	Summary accuracy	Hallucination
F-016	Payment Link Creation	Razorpay/ Cashfree payment links	P0	Sales/ Owner	Conversion friction	Provider API, deal link	Payment provider	Payment entity	Link generated, associated with deal	Link → payment conversion	Provider down
F-017	Payment Status Auto-Update	Webhook → deal status	P0	Owner	Manual reconciliation	Webhook receiver, deal updater	Payment provider	Payment status	Successful payment → Won	Reconciliation rate	Webhook failure

Feature ID	Feature Name	Description	Priority	Target User	Problem Solved	Functional Requirements	Dependencies	Data Required	Acceptance Criteria	Success Metric	Risks
F-018	Attribution Dashboard	Source-to-conversion dashboard	P0	Owner	Revenue visibility	Aggregation queries, dashboard UI	All entities	All events	Dashboard reconciles with sample	Trust score	Data gaps
F-019	Owner Dashboard	Revenue overview	P0	Owner	Owner clarity	Aggregations, charts	All entities	All entities	Dashboard loads <2s	Owner usage	Performance
F-020	Audit Logs	Log all critical actions	P0	Admin/Security	Compliance & trust	Logger, searchable storage	Logging	Audit event	Logs searchable, tamper-resistant	Audit completeness	Storage cost
F-021	Multi-Tenant Workspaces	Tenant isolation	P0	Super Admin	SaaS foundation	RLS or app-level tenant filter	DB	Tenant entity	Cross-tenant access blocked	Isolation tests pass	Misconfig
F-022	User Management	Invite/manage users	P0	Owner/Admin	Team access	Invite, role assign	RBAC	User entity	Access follows role	Invite acceptance rate	Permission bug
F-023	RBAC Enforcement	Role-based access	P0	All	Security	Permission checks	DB	Role, permission	Unauthorized blocked	Permission incidents	Bug
F-024	Notifications (Multi-channel)	WA/email/in-app alerts	P0	All	Stay informed	Notification service	Channels	Notification log	Notifications respect preferences	Notification CTR	Spam
F-025	Source Identity Resolution	Match touchpoints to identity	P0	Product	Cross-channel tracking	Identifier matching	Tracking	Identifier graph	Duplicate events matched	Match rate	Privacy
F-026	Campaign Performance Dashboard	Per-campaign performance	P1	Owner/Admin	Campaign ROI	Filterable views	Tracking	Campaign data	Filters work; data reconciles	Campaign decisions	Stale data
F-027	AI Personalization	Personalize nurture messages	P1	Sales	Generic messages	LLM personalization	Nurture + AI	Lead context	Drafts above quality threshold	Approval rate	Tone
F-028	AI Follow-up Draft	Auto-draft follow-up	P1	Sales	Slow follow-up	LLM drafting	AI + Calls	Call summary, lead context	Editable, send-logged	Send rate	Hallucination
F-029	AI Proposal Draft	Auto-draft proposal	P1	Sales/Owner	Proposal cycle time	LLM + templates	AI + templates	Lead, offer, call context	Editable, exportable	Cycle time	Hallucination

Feature ID	Feature Name	Description	Priority	Target User	Problem Solved	Functional Requirements	Dependencies	Data Required	Acceptance Criteria	Success Metric	Risks
F-030	Weekly Briefing	AI weekly summary on WA	P1	Owner	Manual review	Aggregation + LLM summary	All entities	Pipeline data	Delivered on schedule	Open rate	Bad summary
F-031	Ghosted Reactivation	14/30/60-day reactivation	P1	Sales/Admin	Lost ghosts	Scheduler + sequence	Nurture	Lead status	Triggers correctly, respects opt-out	Reactivation rate	Spam
F-032	Template Library	Reusable templates per vertical	P1	Admin	Setup speed	Library UI, versioning	Templates	Template entity	Templates versioned, tenant-scoped	Template adoption	Quality
F-033	Integration Health Dashboard	Show integration status	P1	Admin/Super Admin	Silent failures	Health monitor, alerts	Integrations	Integration entity	Failed integrations alert	Time-to-detect	False alerts
F-034	Support Ticketing	Submit and track tickets	P2	Tenant Users	Support tracking	Ticket creation, status	Support	Ticket	Ticket assigned, acknowledged	Resolution time	SLA
F-035	Knowledge Base	Searchable help articles	P2	Tenant Users	Self-serve help	Search, article CMS	KB	Article	Article surfaced by category	KB usage	Stale articles
F-036	Multi-Touch Attribution	Configurable models	Future	Owner/Agency	Channel credit	Model engine	Tracking	Touch data	Models comparable	Adoption	Model trust
F-037	Pixel/Event Script	Website tracking	Future	Admin	Web analytics	Script + receiver	Tracking	Page events	Tenant-scoped events received	Coverage	Privacy
F-038	Server-Side Conversion API	Meta CAPI / Google Offline	Future	Admin	Ad attribution	Server forwarder	Tracking + ads	Conversion events	Events forwarded, retrieved	Match rate	Policy
F-039	Vertical Templates (All 6)	Per-ICP templates	P0/P1	Tenant	Vertical fit	Template engine	Templates	Template config	Template applied at setup	Template adoption	Quality
F-040	Local Business Market Gating	Restrict local template to approved markets	P1	Super Admin	Market discipline	Country/market gating	Onboarding	Market config	Local enabled only in approved markets	Market discipline	Bypass

Feature ID	Feature Name	Description	Priority	Target User	Problem Solved	Functional Requirements	Dependencies	Data Required	Acceptance Criteria	Success Metric	Risks
F-041	Channel Abstraction	WA/ email/ SMS pluggable	P0	CTO/ Product	Channel flexibility	Channel adapter pattern	Messaging	Channel config	Workflows not hard-coded to one channel	Channel switch ease	Adapter quality
F-042	Anonymized Benchmarks	Cross-tenant insights (opt-in)	Future	Owner	Competitive context	Aggregation, anonymization	Tracking	Aggregate data	Opt-in respected	Benchmark trust	Privacy
F-043	White-label	Tenant branding	Future	Agency	Agency reseller	Theming, domain	Platform	Branding config	Branding applied	Agency adoption	Complexity
F-044	Public API	Programmatic access	Future	Admin/ Partner	Integration	API gateway, auth	Platform	API tokens	API documented + functional	API adoption	Security
F-045	Mobile App	Native iOS/ Android	Future	Sales User	On-the-go	Native apps	Platform	Mobile UX	Core flows work on mobile	DAU mobile	Maintenance
F-XYZ	Generic Course Platform Features	LMS-style features	Avoid	N/A	Out of category	—	—	—	—	—	—
F-XYZ	Full Ad Management	Ad creation/ management	Avoid	N/A	Out of category	—	—	—	—	—	—

21. Attribution & Tracking Engine

This is a core module. It is intentionally NOT a Hyros clone. It is a Revenue OS-native tracking layer that goes deeper into the post-lead journey than any pure attribution tool.

21.1 Tracking Philosophy

Principle	Detail
Track the full revenue journey	source → click → lead → qualification → nurture → booking → call → follow-up → proposal → payment → retention
First-party reliability over third-party scale	Start with reliable first-party tracking before chasing browser-side perfection
Every event ties to a lead, tenant, source, timestamp	Tracking events are useless without tenancy and context
Tracking serves service reporting + client dashboards + operator reviews	Not built for ad agencies alone
Tracking respects consent, opt-out, residency, and policy	Privacy is non-negotiable
Distinguish confirmed, inferred, and unknown	Don't pretend to know what you don't

21.2 Positioning vs Hyros

Dimension	Hyros	InnovateX Revenue OS
Primary use case	Paid ad attribution	Full revenue lifecycle attribution
Tracks ad clicks	Deep	Light
Tracks WhatsApp leads	Limited	Native
Tracks AI qualification → booking → call → payment	✗	✓
Tracks retention/repeat	✗	✓
Built for verticals	Ads-focused	Coaches, EdTech, SaaS, ecom, agencies, local
Server-side ad feedback	Strong	Future scope

21.3 MVP Tracking Scope

Capability	MVP Priority	Purpose	Audience Fit
UTM capture & persistence	P0	Track source/medium/campaign	All
Lead source tracking	P0	Identify origin per lead	All
WhatsApp click tracking	P0	Source-specific WA links	Coaches, EdTech, ecom, local
Form tracking	P0	Form submissions tied to source	All

Capability	MVP Priority	Purpose	Audience Fit
Meta Lead Ads attribution	P0	Preserve campaign/ad/adset/UTM	Coaches, EdTech, ecom, local
Booking attribution	P0	Bookings tied to source/campaign	Coaches, SaaS, EdTech, local
Pipeline stage attribution	P0	Stage moves by source	All
Payment/conversion attribution	P0	Won deals tied to source	All
Call outcome attribution	P1	Call result tied to source	Coaches, SaaS, local, EdTech
Campaign dashboard	P0	Channel/campaign comparison	Owner/agency
First-touch attribution	P0	Initial source credit	All
Last-touch attribution	P0	Final touch credit	All
Latest-touch attribution	P1	Most recent influential touch	All
Assisted-touch attribution	P1	Touches between first/last	All

21.4 Future Tracking Scope

Capability	Phase	Purpose
Multi-touch attribution models	V2	Configurable model per tenant
Pixel / event script	Future	Website page/event tracking
Server-side conversion events	Future	Meta CAPI, Google offline conv
Ad-platform feedback loop	Future	Push conversions back to ad platforms
Predictive source quality scoring	Future	ML on historical data
Cohort retention attribution	Future	LTV → original source

21.5 Tracking Engine Flow Diagram

```

flowchart LR
    A[Ad / Content<br/>Source] --> B[Click Link<br/>with UTM]
    B --> C[Landing Page<br/>OR WhatsApp]
    C --> D[Lead Created<br/>+ Source Attached]
    D --> E[AI Qualification<br/>Event]
    E --> F[Lead Scored<br/>+ Routed]
    F --> G[Booking Created<br/>+ Source Inherited]
    G --> H[Call Completed<br/>+ Outcome Logged]
    H --> I[Proposal Sent]
    I --> J[Payment Captured<br/>+ Won]
    J --> K[Retention Events<br/>Tracked]

    style D fill:#0EA5E9,stroke:#06B6D4,color:#fff
    style G fill:#10B981,stroke:#06B6D4,color:#fff
    style J fill:#059669,stroke:#06B6D4,color:#fff

```

21.6 Event Taxonomy (Tracking Subset)

Event Name	Trigger	Required Properties	Optional Properties	Related Entity
source_link_clicked	Tracked link click	tenant_id, source, link_id	utm_*, user_agent, ip_hash	Anonymous → Lead on match
page_viewed	Pixel pageview (future)	tenant_id, url, timestamp	utm_*, referrer, session_id	Anonymous
form_started	Form field focus	tenant_id, form_id	session_id, utm_*	Anonymous
form_submitted	Form submission	tenant_id, form_id, lead_id	utm_*, session_id	Lead
lead_created	Lead entity creation	tenant_id, lead_id, source	utm_*, campaign	Lead
whatsapp_chat_started	WA conversation start	tenant_id, lead_id	source_link, utm_*	Lead
ai_qualification_started	Qualification begin	tenant_id, lead_id	qualification_id	Lead
ai_qualification_completed	Qualification finish	tenant_id, lead_id, score, confidence	route, transcript_id	Lead
lead_scored	Score generation	tenant_id, lead_id, score	reason, model_version	Lead
lead_routed	Lead routed	tenant_id, lead_id, route	rule_id	Lead
booking_link_sent	Booking link delivered	tenant_id, lead_id, channel	template_id	Lead
booking_created	Booking confirmed	tenant_id, lead_id, booking_id, slot	provider, source (inherited)	Booking
call_completed	Call ends	tenant_id, lead_id, call_id	duration, participants	Call
call_summary_generated	AI summary created	tenant_id, call_id, summary_id	objections, next_steps	Call
followup_drafted	AI follow-up drafted	tenant_id, lead_id, draft_id	channel	Lead
proposal_created	Proposal generated	tenant_id, deal_id, proposal_id	amount, offer	Deal
payment_link_created	Payment link generated	tenant_id, deal_id, payment_id	amount, provider	Payment
payment_completed	Payment captured	tenant_id, deal_id, payment_id, status	amount, provider, source (inherited)	Payment
deal_stage_changed	Stage moved	tenant_id, deal_id, from, to	actor, reason	Deal
deal_won	Deal closed Won	tenant_id, deal_id	amount, source	Deal
deal_lost	Deal closed Lost	tenant_id, deal_id	reason, source	Deal
reactivation_started	Reactivation sequence	tenant_id, lead_id, sequence_id	days_ghosted	Lead

21.7 Identity Resolution

Identifier Type	Source	Use
Phone (hashed)	Form/WA/Meta	Cross-channel match
Email (hashed)	Form/Meta	Cross-channel match
Click ID (gclid/fbclid)	Ad platform	Ad attribution
Session ID	Pixel (future)	Web-side identity
Lead ID	App-generated	Canonical identity

Rule: Identity matching must respect consent and never expose cross-tenant data.

21.8 Duplicate Handling

Scenario	Behavior
Same lead, same channel	Merge to existing
Same lead, different channels	Match via identity, merge with notification
Conflicting source	Latest source becomes "latest_source"; original retained as "original_source"
No identity match	Create new lead; flag for human merge

21.9 Consent and Opt-Out

Touchpoint	Consent Required	Storage
Form submission	Yes (checkbox or implicit per region)	consent_at, consent_method
WhatsApp opt-in	Yes (WA policy)	opt_in_at
Email	Yes (unsubscribe link mandatory)	unsubscribed_at
Pixel tracking (future)	Yes (cookie banner)	consent banner state

21.10 Data Accuracy Limitations (Honest Disclosures)

Limitation	Mitigation
Browser tracking imperfection (iOS, ITP, ad blockers)	Use first-party + server-side (future)
UTM strip on redirect	Capture early, persist
Cross-device journeys	Identity resolution + login matching
Self-reporting in qualification	Confidence scoring
WA delivery uncertainty	Channel logs

Reports must distinguish: Confirmed events , Inferred events , Unknown source .

21.11 Privacy & Compliance

Concern	Approach
PII in tracking events	Hash where possible
Cross-tenant aggregation	Opt-in only
Data residency	India (DPDP) + per-market — <i>To Be Finalized</i>
Right to delete	Hard delete + cascading cleanup

21.12 Reporting Requirements

Report	Audience	Frequency
Source-to-booking funnel	Owner/Admin	Real-time
Source-to-payment funnel	Owner/Admin	Real-time
Campaign performance	Owner/Marketing	Real-time
Channel comparison	Owner/Agency	Weekly
Attribution model comparison	Owner/Agency	V2+

21.13 Acceptance Criteria (Tracking)

Criterion	Test
95%+ leads have source attribution	% filled on lead.source
UTMs persist across journey	Sample audit
WA clicks tie back to source link	Match rate test
Booking inherits lead source	Sample audit
Payment attribution matches deal source	Reconciliation test
Cross-tenant isolation in events	Penetration test

21.14 Segment-Specific Tracking Priorities

Segment	Highest-Value Tracking Need
Coaches	Content/ad/referral → qualified lead → booked call → sale
EdTech	Campaign/webinar → inquiry → counselor → enrollment
SaaS Founders	Channel → demo/trial → pipeline stage → customer/onboarding milestone
Ecommerce	Campaign → customer → cart/recovery → repeat purchase
Ecommerce Agencies	Client campaign → lead/customer event → retention reporting
International Local	Google/Meta/web/WhatsApp/call → appointment → customer

21.15 What to Build in MVP vs Defer

Build in MVP	Defer to Future
UTM capture & persistence	Server-side conversion API
WA click tracking links	Multi-touch attribution models
Form tracking	Pixel/event script
Meta Lead Ads attribution	Ad-platform feedback loop
Booking, call, payment attribution	Predictive source scoring
First/last-touch attribution	Cross-tenant benchmarks
Campaign dashboard	White-label tracking

22. Dashboard Requirements

22.1 Dashboard Inventory

#	Dashboard	Target User	Priority
1	Owner Overview Dashboard	Tenant Owner	P0
2	Pipeline Dashboard	Owner, Admin, Sales	P0
3	Attribution Dashboard	Owner, Admin	P0
4	Tracking Dashboard	Owner, Admin	P0
5	Campaign Performance Dashboard	Owner, Admin	P1
6	Activity Dashboard	Admin, Sales	P1
7	Sales User Dashboard	Sales User	P0
8	Admin Dashboard	Tenant Admin	P0
9	Super Admin Dashboard	Super Admin	P0
10	Integration Health Dashboard	Admin, Super Admin	P1
11	Support Dashboard	CS, Super Admin	P2
12	Benchmark Dashboard	Owner	Future

22.2 Dashboard Specifications

22.2.1 Owner Overview Dashboard

Field	Spec
Purpose	Single-glance revenue health
Target User	Tenant Owner
Key Metrics	Leads this week, qualified leads, bookings, deals in pipeline, deals won, revenue captured, top source, AI tasks pending review
Widgets	Funnel chart (capture → booked → won), KPI tiles, top sources, pipeline by stage, recent activity feed
Filters	Date range, source, segment
Actions	Drill into lead/deal, review AI drafts, export
Alerts	Integration failures, low qualified rate, dropping bookings
Drilldowns	Click source → see leads from source; click stage → see deals
Empty States	“No leads yet — let’s set up your first source”
Acceptance Criteria	Loads <2s, reconciles with raw data, mobile-responsive

22.2.2 Pipeline Dashboard

Field	Spec
Purpose	Visual operational pipeline
Target User	Owner, Admin, Sales
Key Metrics	Leads/deals by stage, by owner, by source, by value
Widgets	Kanban (default), table view, stage conversion funnel
Filters	Stage, owner, source, date, segment
Actions	Drag-drop stage, create task, send message, generate proposal
Acceptance Criteria	Drag-drop persists, activity log updates

22.2.3 Attribution Dashboard

Field	Spec
Purpose	Source-to-conversion clarity
Target User	Owner, Admin
Key Metrics	Source → leads, source → bookings, source → deals, source → payments
Widgets	Sankey/funnel, source comparison table, attribution model toggle (V1+)
Filters	Date, source, campaign, segment, model (V1+)
Drilldowns	Click source → see contributing leads/deals
Acceptance Criteria	Reconciles with raw events; honest about confirmed vs inferred vs unknown

22.2.4 Tracking Dashboard

Field	Spec
Purpose	Event-level tracking health
Target User	Admin, Owner
Key Metrics	UTM coverage %, event volume by type, WA click → lead match rate
Widgets	Coverage tiles, event volume chart, source link performance table
Filters	Channel, campaign, date
Acceptance Criteria	Coverage matches sample audit

22.2.5 Campaign Performance Dashboard

Field	Spec
Purpose	Campaign-level ROI clarity
Target User	Owner, Admin
Key Metrics	Per campaign: leads, qualified, booked, won, conversion rate, source breakdown
Widgets	Campaign comparison table, trend chart, top/bottom performers

Field	Spec
Filters	Date, channel, campaign
Acceptance Criteria	Operator can use this for weekly/monthly review

22.2.6 Activity Dashboard

Field	Spec
Purpose	Operational activity tracking
Target User	Admin, Sales
Key Metrics	Calls, messages, tasks completed, bookings — by user/date
Widgets	Heatmap, user activity table
Acceptance Criteria	Activity by user/date visible

22.2.7 Sales User Dashboard

Field	Spec
Purpose	Daily action center for sales
Target User	Sales User
Key Metrics	Today's tasks, leads to call, follow-ups due, proposals pending
Widgets	Task list, lead inbox, draft queue
Actions	Approve/send drafts, mark complete, move stage

22.2.8 Admin Dashboard

Field	Spec
Purpose	Workflow and config oversight
Target User	Tenant Admin
Key Metrics	Automation success rate, integration health, user activity, support tickets
Widgets	Automation log, integration status, user list

22.2.9 Super Admin Dashboard

Field	Spec
Purpose	Platform health and tenant management
Target User	Super Admin
Key Metrics	Active tenants, system uptime, integration health across tenants, support load
Widgets	Tenant list, system health, support queue, audit log search

22.2.10 Integration Health Dashboard

Field	Spec
Purpose	Detect & resolve integration failures
Target User	Admin, Super Admin
Key Metrics	Connection status, sync lag, error rate per integration
Acceptance Criteria	Failed integrations alert with reason

22.2.11 Support Dashboard

Field	Spec
Purpose	Ticket management
Target User	CS, Super Admin
Key Metrics	Open tickets, age, severity, SLA

22.2.12 Benchmark Dashboard (Future)

Field	Spec
Purpose	Compare performance to anonymized peer set
Target User	Owner
Status	Future — requires opt-in + sufficient data + legal review

23. Analytics and Reporting

23.1 Report Inventory

#	Report	Audience	Frequency	Priority
1	Daily Snapshot	Owner	Daily	P1
2	Weekly Briefing	Owner	Weekly	P0
3	Monthly Performance Report	Owner, Admin	Monthly	P1
4	Pipeline Report	Owner, Admin, Sales	On-demand	P0
5	Attribution Report	Owner, Admin	On-demand	P0
6	Tracking Report	Admin	On-demand	P0
7	Campaign ROI Report	Owner, Marketing	On-demand	P1
8	Activity Report	Admin	Weekly	P1
9	Sales Performance Report	Owner, Admin	Weekly	P1
10	Integration Health Report	Admin	Weekly	P1
11	Support Report	CS, Super Admin	Weekly	P2
12	Benchmark Report	Owner	Quarterly	Future

23.2 Report Specifications

Report	Data Source	Metrics	Format	Export	AI Summary	Acceptance
Daily Snapshot	Leads, bookings, deals	Yesterday's activity	WhatsApp/email digest	—	Yes	Delivered by 9 AM local
Weekly Briefing	All entities	Pipeline health, source perf, week-over-week	WhatsApp message	—	Yes	Delivered Monday 9 AM
Monthly Performance	All entities	Funnel conversion, revenue, top sources	PDF/email	PDF	Yes	Auto-generated end of month
Pipeline Report	Deals, stages	Stage volume, conversion, age	Dashboard / CSV	CSV	Optional	Accurate vs raw data
Attribution Report	Tracking events	Source → lead → booking → won → payment	Dashboard / CSV	CSV	Optional	Reconciles
Tracking Report	Events	UTM coverage, event volume, match rate	Dashboard / CSV	CSV	—	Coverage truth
Campaign ROI	Tracking + payments	Per campaign: leads, bookings, deals, conversion	Dashboard / CSV	CSV	Optional	Operator-usable

Report	Data Source	Metrics	Format	Export	AI Summary	Acceptance
Activity Report	User activity	Calls, msgs, tasks by user	Dashboard / CSV	CSV	—	Per-user accuracy
Sales Performance	Sales user activity + deals	Conversion by rep, touchpoints, won	Dashboard / CSV	CSV	Yes	Coach/manager useful
Integration Health	Integration logs	Uptime, sync lag, errors	Dashboard	—	—	Real-time
Support Report	Tickets	Open, age, severity, SLA	Dashboard / CSV	CSV	—	SLA visible
Benchmark Report	Cross-tenant (opt-in)	Anonymized peer comparison	PDF/email	PDF	Yes	Opt-in respected

24. AI Requirements

AI must support revenue workflow. We do not add AI features that aren't useful. Every AI feature must define when AI can act automatically vs when human review is required.

24.1 AI Feature Matrix

AI Feature	Purpose	User	Input Data	Output	Auto-Act	Human Review	Confidence Threshold	MVP
AI Qualification Chat	Qualify leads conversation ally	End Lead	Configured questions, lead context	Conversation , score, route	Yes — if confidence ≥ threshold	Below threshold	To Be Finalized (e.g., 0.75)	✓
AI Lead Scoring Support	Generate score reasoning	Sales/Owner	Qualification answers, source, history	Score (1–10), reason	No — always written	Score above 7 → auto-route to sales	To Be Finalized	✓
AI Nurture Personalization	Personalize message drafts	Sales/Admin	Template, lead context	Draft message	No — drafts only	Always before send (early)	N/A	V1
AI Call Summary	Summarize calls	Sales	Transcript	Summary, objections, next steps	Yes — generates	User edits	N/A	✓
AI Follow-up Draft	Auto-draft post-call follow-up	Sales	Call summary, lead context	Draft message	No — drafts only	Always before send (early)	N/A	V1
AI Proposal Draft	Generate proposal	Sales/Owner	Offer, lead, call context	Draft proposal	No — drafts only	Always before send	N/A	V1
AI Weekly Briefing	Plain-language insights	Owner	Pipeline + tracking data	Briefing message	Yes — generates	User reads, can flag	N/A	V1
AI Onboarding Assistant	Guide setup	Tenant Owner	Setup state	Suggestions	No — suggests	User decides	N/A	Future
AI Sales Coach	Coach reps on calls	Sales	Call patterns	Coaching tips	No — suggests	Coach decides	N/A	Future
AI Anomaly Detection	Detect unusual patterns	Owner	Time-series data	Alerts	Yes — alerts	User decides action	To Be Finalized	Future

24.2 AI Risk Controls

Risk	Control
Hallucination	Confidence gating; human review for high-stakes outputs
Privacy of conversation data	Tenant isolation; minimize prompt context; opt-out respected
Prompt injection	Sanitize inputs; constrain output schemas

Risk	Control
Drift in AI quality	Logged AI outputs; periodic QA reviews
Over-automation	Default to drafts/suggestions, not auto-send

24.3 Prompt & Version Management

Item	Spec
Prompts stored per tenant, vertical, use case	✓
Prompt versioning with approval status	✓
A/B testing of prompts	V1+
Tenant-level prompt overrides	V1+
Prompt registry searchable	✓

24.4 AI Usage Logging

Every AI call must log: - Tenant ID, user ID, lead ID (if applicable) - Input context (PII-minimized) - Output - Confidence score (if available) - User action (approved/edited/rejected) - Errors - Model + prompt version

24.5 AI Acceptance Criteria

Feature	Acceptance Criterion
Qualification chat	Captures all required fields; score generated; transcript stored
Call summary	Reviewer agreement $\geq 80\%$ on objections + next steps
Follow-up draft	Send-without-edit rate $\geq 50\%$ (target $\geq 70\%$)
Weekly briefing	Cites metrics; no unsupported claims
Confidence gating	Low-confidence outputs route to human

25. Automation Requirements

25.1 Automation Inventory

#	Automation	Trigger	Conditions	Action	Priority
1	Lead Capture	Form submit / WA / Meta webhook	Tenant active	Create lead, dedupe, notify	P0
2	Qualification Routing	Score generated	Score $\geq$ threshold	Route to booking / nurture / human	P0
3	Booking Automation	Lead qualified	Hot lead	Send booking link, schedule reminders	P0
4	Nurture Automation	Lead scored mid/cold	Status active	Run scheduled sequence steps	P0
5	Ghosted Reactivation	14/30/60-day inactivity	Lead not converted	Trigger reactivation sequence	P1
6	Payment Status Update	Payment webhook	Status = captured	Move deal to Won	P0
7	Weekly Briefing	Scheduled (Monday 9 AM)	Tenant active	Generate + send via WA	P1
8	Support Ticket Routing	Ticket created	By category/severity	Assign to right person	P2
9	Client Onboarding	Tenant created	Owner confirmed	Run onboarding checklist	P1
10	Failed Integration Alert	Integration error	Threshold exceeded	Alert owner/admin	P1

25.2 Per-Automation Specification

25.2.1 Lead Capture Automation

- **Trigger:** Form submission, WA webhook, Meta webhook, manual entry
- **Conditions:** Tenant active, dedupe check passes
- **Action:** Create lead, attach source/UTM, fire `lead_created` event, notify owner
- **User Controls:** Notification preferences, dedupe rules
- **Logs:** All capture attempts, including failures
- **Failure Handling:** Retry webhook 3x with exponential backoff; log permanent failure
- **Retry Logic:** 3 attempts over 15 minutes
- **Compliance:** Capture consent state
- **Acceptance Criteria:** Lead lands in <30s with source intact

25.2.2 Qualification Routing

- **Trigger:** AI qualification complete
- **Conditions:** Score generated, confidence available
- **Action:** Route by score band + segment + availability rules

- **User Controls:** Routing rules configurable
- **Failure Handling:** Route to human if confidence < threshold
- **Acceptance Criteria:** Hot leads → booking; mid → nurture; cold → long nurture

25.2.3 Booking Automation

- **Trigger:** Hot lead routing OR manual send
- **Conditions:** Lead qualified, calendar connected
- **Action:** Send booking link with personalized message, schedule reminders
- **Failure Handling:** Calendar API down → email fallback
- **Acceptance Criteria:** Booking link delivered <60s; CRM updates on booking

25.2.4 Nurture Automation

- **Trigger:** Lead enters nurture segment
- **Conditions:** Status = nurture, opt-in respected
- **Action:** Schedule and send sequence steps; pause on status change
- **User Controls:** Sequence builder, pause overrides
- **Compliance:** WhatsApp template policy, unsubscribe enforcement
- **Acceptance Criteria:** Sequences send, pause, log correctly

25.2.5 Ghosted Reactivation

- **Trigger:** Lead inactive for 14/30/60 days
- **Conditions:** Not won/lost, not opted-out
- **Action:** Send reactivation sequence
- **Acceptance Criteria:** Triggers fire at correct intervals; respect opt-out

25.2.6 Payment Status Update

- **Trigger:** Payment webhook
- **Conditions:** Webhook signature verified
- **Action:** Update payment record, move deal to Won, fire events
- **Failure Handling:** Webhook retry queue
- **Acceptance Criteria:** Webhook → deal Won within 30s

25.2.7 Weekly Briefing

- **Trigger:** Schedule (Monday 9 AM tenant timezone)
- **Conditions:** Tenant active, data available
- **Action:** AI generates summary, send via WA
- **Acceptance Criteria:** Delivered on schedule with valid metrics

25.2.8 Support Ticket Routing

- **Trigger:** Ticket creation
- **Conditions:** Category/severity assigned
- **Action:** Route to correct assignee
- **Acceptance Criteria:** Ticket assigned within 5 minutes

25.2.9 Client Onboarding Automation

- **Trigger:** Tenant created
- **Conditions:** Owner confirmed
- **Action:** Send checklist, schedule reminders, surface next step
- **Acceptance Criteria:** Onboarding status visible; reminders fire

25.2.10 Failed Integration Alert

- **Trigger:** Integration error (multiple consecutive failures)
 - **Action:** Alert admin/owner via WA + email; show in integration health dashboard
 - **Acceptance Criteria:** Alert within 5 min of threshold breach
-

26. Integration Requirements

26.1 Integration Matrix

Integration	Purpose	Data Pulled	Data Pushed	Trigger Events	Auth	Failure Handling	Sync Freq	Security	Priority	MVP/ Future
WhatsApp BSP (WATI/ Wablas)	Capture + nurture	Inbound messages , status	Outbound messages , templates	Inbound webhook, manual send	WA API	Retry + manual fallback	Real-time	Template policy, opt-out	P0	MVP
Meta Lead Ads	Ad lead capture	Lead data, campaign, UTM	—	New lead webhook	OAuth	Retry sync, alert	Real-time + scheduled backup	OAuth token vault	P0	MVP
Cal.com / Calendly	Booking	Availability, event, reminders	Booking link, reschedule	Booking created/ cancelled	OAuth	Resync, notify	Real-time	Calendar privacy	P0	MVP
Razorpay	Payments	Payment status	Payment links	Payment success/ failure	API keys	Webhook retry	Real-time	PCI handled by provider	P0	MVP
Cashfree	Payments	Payment status	Payment links	Payment success/ failure	API keys	Webhook retry	Real-time	PCI handled	P0	MVP
Stripe	International payments	Payment status	Payment links	Payment success/ failure	API keys	Webhook retry	Real-time	PCI handled	P1	V1 (intl. markets)
Fathom	Call intelligence	Recording , transcript	—	Call ended	OAuth	Manual upload fallback	On-event	Call consent	P0	MVP
Otter	Call intelligence	Recording , transcript	—	Call ended	API key	Manual upload	On-event	Call consent	P1	MVP/V1
Zoom	Calls	Recording	—	Call ended	OAuth	Manual upload	On-event	Call consent	P1	MVP/V1
Claude / OpenAI	AI workflows	—	Prompt	AI request	API key	Fallback model	On-request	Minimize PII in context	P0	MVP
Pinecone	AI context store	Embeddings	Embeddings	Lead/ knowledge update	API key	Reindex/ retry	On-event	Tenant separation	P1	MVP/V1
SendGrid	Email	—	Email	Sequence step	API key	Retry, bounce handling	On-event	Unsubscribe compliance	P0	MVP
Postmark	Email	—	Email	Sequence step	API key	Retry	On-event	Unsubscribe	P1	MVP/V1

Integration	Purpose	Data Pulled	Data Pushed	Trigger Events	Auth	Failure Handling	Sync Freq	Security	Priority	MVP/ Future
Supabase	DB/auth/storage	App data	App ops	App operations	Service creds	Backup/restore	Real-time	RLS, tenant isolation	P0	MVP
n8n / Zapier / Pabbly	External workflows	Variable	Variable	Webhook/trigger	API/webhook	Manual fallback	On-event	Audit	P1	V1
Course Platforms (Graphy/ Kajabi/ Spayee)	Enrollment events	Enrollment, course, cohort	—	Enrollment/update	API/webhook	Retry queue	On-event	Tenant consent	Future	V2+
HubSpot (Two-Way)	CRM sync	Contact/deal/stage	Contact/deal/stage	Update events	OAuth	Conflict handling	Real-time	Field mapping	Future	V2+
Apollo.io	Prospecting	Contact/company data	—	User action	API key	Graceful failure	On-demand	Consent/usage	Future	V2+
Google Ads	Ad attribution	Spend, campaign, conversion	Conversions (future)	Scheduled sync	OAuth	Retry, gap alerts	Scheduled	OAuth security	Future	V2+
Website Event Script	Web tracking	Page event, CTA, form	—	Page view/click/submit	Tenant script auth	Queue/retry	Real-time	Consent banner	Future	V2+
Meta Conversions API	Server-side conversion	—	Conversion events	Conversion event	Meta business permissions	Retry queue	On-event	Hashing, policy	Future	V2+
Google Ads Conversion API / Offline Import	Ad conversion reporting	—	Conversion events	Deal won / payment / booking	Google OAuth	Retry, manual export fallback	On-event	Consent + minimization	Future	V2+
LinkedIn Extension	Lead capture	Profile/source	—	Manual action	Extension permission	Manual fallback	On-action	Consent	Future	Future

26.2 Integration Principles

Principle	Detail
Failure visibility	Every integration is monitored; failures surface in integration health dashboard
Graceful degradation	When integration fails, workflows fall back (e.g., WA → email)
Credential security	OAuth tokens encrypted; API keys vaulted
Tenant scoping	Every integration scoped per tenant
Audit logging	Connect, disconnect, sync errors logged

27. Data Requirements

27.1 Data Entity Catalog

Entity	Purpose	Key Fields	Relationships	Ownership	Retention	Privacy	Reporting Use
Tenant	Isolated workspace	tenant_id, name, status, region, vertical_type, target_country, settings	Owns Users, Leads, Deals	Super Admin	Indefinite while active	Tenant-scoped	All reports
Workspace	Sub-org within tenant (agencies)	workspace_id, tenant_id, client_name	Belongs to Tenant	Tenant Owner	While active	Tenant-scoped	Agency reports
User	Platform user	user_id, tenant_id, role_id, email, phone, MFA status	Belongs to Tenant	Tenant	While active + retention	PII protected	Activity reports
Role	Permission set	role_id, name, permission_set	—	System	Indefinite	—	RBAC
Permission	Atomic permission	permission_id, scope, action	—	System	Indefinite	—	RBAC
Lead	Prospect record	lead_id, tenant_id, name, phone, email, source, original_source, latest_source, score, status, intent_type, lifecycle_stage, consent	Has Conversations, Bookings, Deals	Tenant	Per retention policy	PII	All reports
Contact	Person (post-conversion)	contact_id, tenant_id, lead_id, customer_status	Linked to Lead	Tenant	Per retention	PII	LTV reports
Conversation	WA/email/chat thread	conversation_id, lead_id, channel, status, last_message_at	Belongs to Lead	Tenant	Per retention	PII	Activity
Message	Individual message	message_id, conversation_id, channel, template, status, timestamp	Belongs to Conversation	Tenant	Per retention	PII	Activity

Entity	Purpose	Key Fields	Relationships	Ownership	Retention	Privacy	Reporting Use
Source	Acquisition source	source_id, tenant_id, name, channel	Referenced by Leads	Tenant	Indefinite	—	Attribution
Campaign	Marketing campaign	campaign_id, tenant_id, name, channel, source_id	Referenced by Leads	Tenant	Indefinite	—	Attribution
UTM	UTM parameter set	utm_id, source, medium, campaign, content, term	Embedded in Lead/Event	Tenant	Indefinite	—	Attribution
Tracking Event	Atomic tracked event	event_id, tenant_id, event_name, lead_id, source, campaign, timestamp, lifecycle_stage, properties	Linked to Lead/Deal	Tenant	Per retention	Hashed PII	All tracking
Identity Resolution Record	Identity match	identity_id, tenant_id, identifiers, lead_id	Maps identifiers to Leads	Tenant	Per retention	Hashed	Tracking
AI Qualification Record	Qualification session	qualification_id, lead_id, responses, score, confidence, route, transcript_id	Belongs to Lead	Tenant	Per retention	PII	AI reports
Lead Score	Score history	score_id, lead_id, score, reason, confidence, model_version, actor	Belongs to Lead	Tenant	Per retention	—	Scoring reports
Deal	Sales opportunity	deal_id, lead_id, stage, owner_id, amount_place holder, status, pipeline_type	Belongs to Lead	Tenant	Per retention	—	Pipeline
Pipeline Stage	Stage definition	stage_id, tenant_id, name, order, pipeline_type	Referenced by Deals	Tenant	Indefinite	—	Pipeline

Entity	Purpose	Key Fields	Relationships	Ownership	Retention	Privacy	Reporting Use
Booking	Calendar event	booking_id, lead_id, calendar_provider, time, status, source (inherited)	Belongs to Lead	Tenant	Per retention	—	Booking reports
Call	Call record	call_id, lead_id, transcript, summary, objections, next_steps	Belongs to Lead	Tenant	Per retention	PII (transcripts)	Call reports
Call Summary	AI summary	summary_id, call_id, summary, action_items	Belongs to Call	Tenant	Per retention	PII	Call reports
Task	Action item	task_id, owner_id, lead_id, due_date, status	Belongs to Lead/User	Tenant	Per retention	—	Activity
Nurture Sequence	Sequence config	sequence_id, tenant_id, segment, steps, channel	Reusable	Tenant	While active	—	Nurture reports
Automation	Automation config	automation_id, tenant_id, trigger, conditions, action, status	—	Tenant	While active	—	Automation logs
Payment Link	Payment link	payment_id, deal_id, provider, link, status, timestamp, amount	Belongs to Deal	Tenant	Per retention	PCI by provider	Payment reports
Payment Status	Payment outcome	(joined with Payment Link)	—	Tenant	Per retention	—	Payment reports
Report	Generated report	report_id, tenant_id, period, metrics, generated_at	—	Tenant	Per retention	—	—
Notification	Alert	notification_id, user_id, channel, content, status	—	Tenant	Per retention	—	Notification logs
Integration	Connected app	integration_id, tenant_id, provider, status, credential_ref	—	Tenant	While active	OAuth vaulted	Integration health

Entity	Purpose	Key Fields	Relationships	Ownership	Retention	Privacy	Reporting Use
Audit Log	Security/ change trace	audit_id, actor_id, tenant_id, action, object, timestamp	—	Tenant + Super Admin	Indefinite (compliance)	—	Compliance
Support Ticket	Support request	ticket_id, tenant_id, category, severity, status, owner_id	—	Tenant + Super Admin	Per retention	—	Support
Template	Reusable template	template_id, tenant_id, type, content, version	—	Tenant	While active	—	—
Prompt Version	AI prompt version	prompt_id, tenant_id, vertical_tag, version, status, content	—	Tenant + System	Indefinite	—	AI quality
Consent / Opt-Out Record	Consent state	consent_id, lead_id, channel, state, timestamp, method	Belongs to Lead	Tenant	Indefinite (legal)	Sensitive	Compliance
Benchmark Data (Future)	Anonymized aggregate	benchmark_id, segment, metric, value, period	—	System	Indefinite	Anonymized	Benchmark reports
Market Approval Status	Market enablement	market_id, country, segment, approved_at	—	Super Admin	Indefinite	—	—

27.2 Critical Data Rules

Rule	Detail
Tenant-scoping	Every table with customer data has <code>tenant_id</code>
Row-level security	Enforced at DB or application layer; strict tenant filter
PII minimization in AI prompts	Pass only essential context to LLMs
Consent state stored	Per channel, with timestamp and method
Audit trail immutable	Append-only audit log
Soft delete + hard delete	Soft delete first; hard delete on legal request
Backup encrypted at rest	Database + storage backups encrypted

28. Event Taxonomy

28.1 Event Schema Standard

Every event must carry: `event_id` , `tenant_id` , `event_name` , `timestamp` (ISO 8601), `actor_type` (system/user/lead/automation), `actor_id` (when applicable), and event-specific `properties` .

28.2 Full Event Catalog

Event Name	Trigger	Required Properties	Optional Properties	Related Entity	Reporting Use
<code>source_link_clicked</code>	Click on tracked link	<code>tenant_id</code> , <code>source</code> , <code>link_id</code>	<code>utm_*</code> , <code>user_agent</code> , <code>ip_hash</code>	Anonymous → Lead	Attribution
<code>page_viewed</code>	Pixel pageview (future)	<code>tenant_id</code> , <code>url</code> , <code>timestamp</code>	<code>utm_*</code> , <code>referrer</code> , <code>session_id</code>	Anonymous	Funnel (future)
<code>form_started</code>	Form field focus	<code>tenant_id</code> , <code>form_id</code>	<code>session_id</code>	Anonymous	Form analytics
<code>form_submitted</code>	Form submit	<code>tenant_id</code> , <code>form_id</code> , <code>lead_id</code>	<code>utm_*</code> , <code>session_id</code>	Lead	Capture
<code>lead_created</code>	Lead entity created	<code>tenant_id</code> , <code>lead_id</code> , <code>source</code>	<code>utm_*</code> , <code>campaign</code>	Lead	Capture, attribution
<code>whatsapp_chat_started</code>	WA conversation start	<code>tenant_id</code> , <code>lead_id</code>	<code>source_link</code> , <code>utm_*</code>	Lead	WA tracking
<code>ai_qualification_started</code>	Qualification begin	<code>tenant_id</code> , <code>lead_id</code>	<code>qualification_id</code>	Lead	AI metrics
<code>ai_qualification_completed</code>	Qualification finish	<code>tenant_id</code> , <code>lead_id</code> , <code>score</code> , <code>confidence</code>	<code>route</code> , <code>transcript_id</code>	Lead	AI metrics, funnel
<code>lead_scored</code>	Score generation	<code>tenant_id</code> , <code>lead_id</code> , <code>score</code>	<code>reason</code> , <code>model_version</code>	Lead	Scoring
<code>lead_routed</code>	Lead routed	<code>tenant_id</code> , <code>lead_id</code> , <code>route</code>	<code>rule_id</code>	Lead	Routing health
<code>nurture_started</code>	Sequence start	<code>tenant_id</code> , <code>lead_id</code> , <code>sequence_id</code>	<code>step_count</code>	Lead	Nurture
<code>nurture_message_sent</code>	Sequence step	<code>tenant_id</code> , <code>lead_id</code> , <code>sequence_id</code> , <code>step_id</code> , <code>channel</code>	<code>template_id</code>	Lead	Nurture
<code>nurture_paused</code>	Sequence paused	<code>tenant_id</code> , <code>lead_id</code> , <code>sequence_id</code>	<code>reason</code>	Lead	Nurture health
<code>booking_link_sent</code>	Booking link delivered	<code>tenant_id</code> , <code>lead_id</code> , <code>channel</code>	<code>template_id</code>	Lead	Booking funnel
<code>booking_created</code>	Booking confirmed	<code>tenant_id</code> , <code>lead_id</code> , <code>booking_id</code> , <code>slot</code>	<code>provider</code> , <code>source</code> (inherited)	Booking	Conversion
<code>booking_cancelled</code>	Booking cancelled	<code>tenant_id</code> , <code>booking_id</code>	<code>reason</code>	Booking	Conversion
<code>call_completed</code>	Call ends	<code>tenant_id</code> , <code>lead_id</code> , <code>call_id</code>	<code>duration</code> , <code>participants</code>	Call	Activity

Event Name	Trigger	Required Properties	Optional Properties	Related Entity	Reporting Use
call_summary_generated	AI summary	tenant_id, call_id, summary_id	objections, next_steps	Call	AI metrics
followup_drafted	AI follow-up	tenant_id, lead_id, draft_id	channel	Lead	AI metrics
proposal_created	Proposal generated	tenant_id, deal_id, proposal_id	amount, offer	Deal	Pipeline
payment_link_created	Payment link generated	tenant_id, deal_id, payment_id	amount, provider	Payment	Pipeline
payment_completed	Payment captured	tenant_id, deal_id, payment_id, status	amount, provider, source	Payment	Conversion
deal_stage_changed	Stage moved	tenant_id, deal_id, from, to	actor, reason	Deal	Pipeline
deal_won	Deal won	tenant_id, deal_id	amount, source	Deal	Conversion
deal_lost	Deal lost	tenant_id, deal_id	reason, source	Deal	Loss analysis
reactivation_started	Reactivation sequence	tenant_id, lead_id, sequence_id	days_ghosted	Lead	Reactivation
report_viewed	User views report	tenant_id, user_id, report_id	—	Report	Product analytics
weekly_briefing_sent	Briefing delivered	tenant_id, channel	summary_id	—	Briefing health
integration_failed	Integration error	tenant_id, integration_id, error_code	retry_count	Integration	Integration health
user_invited	User invite sent	tenant_id, inviter_id, invitee_email, role	—	User	Admin
role_changed	Role assignment changed	tenant_id, user_id, from_role, to_role, actor_id	—	User	Audit
impersonation_started	Super Admin impersonation	tenant_id, super_admin_id, reason	—	—	Security audit
audit_event_created	Audit log entry	tenant_id, actor_id, action, object	—	Audit	Compliance

29. UX Requirements

29.1 UX Philosophy

The UX must be usable by a non-technical coach in 10 minutes, while still being powerful enough for a 50-person agency. This is achieved through layered disclosure: simple defaults, advanced controls when needed.

29.2 UX Requirements Matrix

Requirement	Detail	Acceptance
Simple navigation	Top-level: Home, Leads, Pipeline, Nurture, Calendar, Calls, Analytics, Integrations, Team, Admin	Owner finds any feature in ≤3 clicks
Founder-friendly language	Plain English; avoid jargon like “MQL”, “SQL”, “ICP” in UI	Glossary not needed for primary flows
Clear dashboard hierarchy	Top: KPIs. Middle: funnel/pipeline. Bottom: activity feed	Eye flow tested
Setup checklist	Visible progress, suggested next steps	“What’s next” always visible
Empty states	Helpful, action-oriented	All key screens have empty states
Loading states	Skeleton screens, not spinners only	<500ms perceived load
Error states	Clear, actionable, no jargon	User knows what to do
Success states	Confirm action with subtle feedback	Saves/sends confirmed
Tooltips	On hover; explain metrics/fields	All metrics tooltiped
Guided onboarding	Interactive first-time walkthrough	First-value <4 hours
Mobile responsiveness	Core flows usable on mobile web	Mobile audit passes
Accessibility	WCAG 2.1 AA target	Audit passes
Role-aware experience	UI hides/shows by role	Sales user doesn’t see admin
Low clutter	One primary action per screen	Reviewed per page
Clear next action	“What should I do now?” never ambiguous	User-testable
Explainable AI outputs	Score explanations, summary basis visible	All AI outputs explainable
Explainable attribution	“Confirmed / inferred / unknown” labeling	Tested in dashboard

29.3 UX Acceptance Standards

Area	Standard
First-time setup	<4 hours (assisted), <2 hours (V1 self-serve)
Non-technical usability	Coach owner understands key metrics without help

Area	Standard
Sales speed	Update deal stage in <10 seconds
AI transparency	Users see why score was assigned
Human control	High-impact AI outputs reviewable

30. UI Requirements

30.1 Brand Feel

Attribute	Target
Premium	Looks expensive without being heavy
Modern	2024–2026 SaaS aesthetic
Clean	Whitespace-heavy, low chrome
Dashboard-first	Data is hero
Trustworthy	Quiet authority, not flashy
Data-rich	Charts, tables, KPIs — never overwhelming

30.2 Inspiration Quality Bar (Not for Copying)

Inspiration	What to Borrow
HubSpot	Workflow composability
Hyros	Attribution clarity
GoHighLevel	All-in-one density (but cleaner)
Stripe	Documentation, payment elegance
Linear	Speed, keyboard-first feel
ClickUp	Custom views (but lighter)
Mixpanel	Funnel clarity
Segment	Event taxonomy hygiene

30.3 UI Components Required

Component	Purpose
Cards	KPI tiles, list items, lead/deal cards
Tables	Lead inbox, deal lists, reports
Kanban	Pipeline
Charts	Funnels, bar, line, sankey (attribution)
Filters	Date, source, status, owner, segment
Timelines	Lead activity, deal history, audit log
Status Badges	Stage, score, integration health
Notification Center	Persistent center, role-aware
Integration Health Indicators	Green/yellow/red dots with detail
Campaign Comparison Views	Side-by-side metrics

Component	Purpose
Lead Detail Timeline	Unified vertical timeline
Attribution Path View	Visualize touch sequence per lead/deal

30.4 UI Color & Type Direction

Element	Direction
Primary brand	Deep navy / charcoal (#0F172A / #1E293B)
AI/SaaS accent	Electric blue / cyan (#06B6D4 / #0EA5E9)
Growth/revenue	Green (#10B981 / #059669)
Caution	Amber (#F59E0B)
Error	Red (#EF4444)
Background	Soft gray (#F8F AFC) + white (#FFFFFF)
Headings	Bold sans-serif (Inter, IBM Plex Sans)
Body	Same family, regular weight

31. Onboarding Requirements

31.1 Onboarding Modes

flowchart LR

A[MVP:
Assisted Onboarding
InnovateX team-led] --> B[V1:
Semi-Self-Serve
Checklist + Support] --> C[Future:
Full Self-Serve
Wizard + AI Assistant]

style A fill:#0F172A,stroke:#06B6D4,color:#fff

style B fill:#0EA5E9,stroke:#06B6D4,color:#fff

style C fill:#10B981,stroke:#06B6D4,color:#fff

31.2 Onboarding Checklist (All Modes)

Step	Action	Owner	MVP	V1	Future
1	Tenant creation	InnovateX (MVP) → Self (V1+)	Assisted	Self	Self
2	Business profile	Tenant Owner	✓	✓	✓
3	Segment/template selection	Tenant Owner	✓	✓	✓
4	Target country (market gating)	Tenant Owner	✓	✓	✓
5	Lead source setup	Owner + Admin	Assisted	Guided	Self
6	WhatsApp setup (BSP connect)	Admin	Assisted	Guided	Self
7	Meta Lead Ads connection	Admin	Assisted	Guided	Self
8	Form setup (embed)	Admin	Assisted	Guided	Self
9	Qualification questions	Admin	Template	Customize	Customize
10	Scoring logic	Admin	Template	Customize	Customize
11	Nurture sequence selection	Admin	Template	Customize	Customize
12	Calendar connection	Admin	Assisted	Guided	Self
13	Payment setup	Admin	Assisted	Guided	Self
14	Team invite	Owner	Self	Self	Self
15	First lead capture	System	Activation	Activation	Activation
16	First AI qualification	System	Activation	Activation	Activation
17	First booking	System	Activation	Activation	Activation
18	First attribution report seen	Owner	Validation	Validation	Validation

31.3 Activation Event

Activation = First lead captured + First AI qualification + First booking, all within 24 hours of completing setup.

31.4 Mode Comparison

Mode	Duration	Owner Effort	InnovateX Effort	Pricing Implication
Assisted (MVP)	1–3 days	Low	High	Includes service hours
Semi-Self-Serve (V1)	4–24 hours	Medium	Medium	Lower price tier
Full Self-Serve (Future)	1–4 hours	High	Low	Lowest price tier

32. Security Requirements

32.1 Security Architecture

ID	Requirement	Detail	Priority
SEC-001	Encryption at Rest	Sensitive tenant data encrypted (AES-256)	P0
SEC-002	Encryption in Transit	TLS 1.2+ for all traffic	P0
SEC-003	MFA	Available; mandatory for Super Admin + Owner	P0
SEC-004	RBAC	Strict role enforcement; unauthorized blocked + logged	P0
SEC-005	Tenant Isolation	RLS or app-layer filter; tested	P0
SEC-006	Row-Level Security	DB-level RLS for tenant tables	P0
SEC-007	Audit Logs	Critical actions logged immutably	P0
SEC-008	Impersonation Logging	Reason + time limit + audit	P0
SEC-009	Backup & Recovery	Daily backups, tested restore	P0
SEC-010	Incident Response	Documented playbook	P1
SEC-011	Secrets Management	Vault; no plaintext secrets	P0
SEC-012	OAuth Token Security	Encrypted, refreshable, rotatable	P0
SEC-013	AI Data Handling	PII minimization; logged	P0
SEC-014	Integration Credential Protection	Vaulted, scoped	P0
SEC-015	Export Restrictions	Role-gated; logged	P1
SEC-016	Admin Access Controls	IP allowlist for Super Admin recommended	P1

32.2 Security Controls Matrix

Control	Tenant Owner	Sales	Read-Only	Super Admin
MFA Required	Recommended	Optional	Optional	Mandatory
IP Allowlist	Optional	—	—	Recommended
Session Timeout	8h	8h	8h	4h
Sensitive Field Mask	View	View own	View	View w/ audit
Data Export	Allowed	—	—	Allowed w/ audit
Impersonation	—	—	—	Allowed w/ reason+log

32.3 Penetration Testing

Test	Frequency
Cross-tenant access	Pre-launch + quarterly
OWASP Top 10	Pre-launch + annually
API security	Pre-launch + on major changes
Integration credential leak	Pre-launch

33. Compliance and Privacy

33.1 Compliance Matrix

Requirement	Status	Notes
Consent Collection	Mandatory	Per channel; timestamped
Opt-Out Management	Mandatory	Enforced across nurture + manual
WhatsApp Policy Compliance	Mandatory	Templates approved; window rules
Email Unsubscribe Compliance	Mandatory	CAN-SPAM, GDPR-style unsub
Data Retention Policy	<i>To Be Finalized by legal</i>	Per region
Data Deletion (Right to Erasure)	Mandatory	Hard delete on request
GDPR Readiness	Future for EU	<i>To Be Finalized</i>
India DPDP Act Readiness	Mandatory	Designed in
DPA (Data Processing Agreement)	Required enterprise	<i>To Be Finalized</i>
Cookie / Tracking Consent	Required for pixel	Banner per region
Platform Policy Compliance	Mandatory	WA BSP, Meta, Google
Call Recording Consent	Mandatory	Per region — <i>To Be Finalized</i>
International Market Implications	Per market	GDPR/CCPA/PDPA — <i>To Be Finalized</i>
SOC 2 Readiness	Future	Controls designed early

33.2 Data Processing Principles

Principle	Application
Lawfulness	Process data with lawful basis (consent, contract)
Purpose limitation	Use data only for stated purpose
Data minimization	Collect only what's needed
Accuracy	Allow users to correct data
Storage limitation	Retain per policy; auto-delete past retention
Integrity & confidentiality	Security controls per Section 32
Accountability	Audit logs, documentation

33.3 Region-Specific Notes

Region	Key Rule
India	DPDP Act + data residency
EU/UK	GDPR — <i>Future scope</i>
USA	State-by-state (CCPA in CA) — <i>To Be Finalized</i>

Region	Key Rule
UAE	Federal Decree-Law on Personal Data Protection — <i>To Be Finalized</i>
Australia	Privacy Act 1988 — <i>To Be Finalized</i>
Singapore	PDPA — <i>To Be Finalized</i>
Saudi Arabia	PDPL — <i>To Be Finalized</i>
Canada	PIPEDA — <i>To Be Finalized</i>

 All “To Be Finalized” items require formal legal review before public launch in the relevant market.

34. Non-Functional Requirements (NFRs)

ID	Requirement	Target	Acceptance	Priority
NFR-001	API Read Performance	p95 <500ms	Continuous monitoring	P0
NFR-002	Write Performance	p95 <2s	Continuous monitoring	P0
NFR-003	AI Response Performance	<3s where feasible	Graceful state if slower	P1
NFR-004	WhatsApp Delivery	<30s where provider allows	Delivery logs	P0
NFR-005	Scalability	100 → 10K tenants path	Load-tested per phase	P0
NFR-006	Availability	99.5% MVP → 99.9% by Phase 5	Uptime reported monthly	P0
NFR-007	Usability	First value <4h (assisted), <2h (V1)	Activation tracking	P0
NFR-008	Maintainability	CI/CD, modular, tested	Code review + coverage (TBF)	P0
NFR-009	Observability	Logs, metrics, traces, AI logs	Errors diagnosable	P0
NFR-010	Accessibility	WCAG 2.1 AA target	Audit	P1
NFR-011	Mobile Responsiveness	Core flows on mobile web	Mobile QA	P1
NFR-012	AI Response Performance	p95 <5s for non-streaming	Monitored	P1
NFR-013	Integration Resilience	Retry + alert on failure	Failure tests	P0
NFR-014	Data Accuracy	95%+ source attribution	Sample audits	P0
NFR-015	Security	Per Section 32	Per-control acceptance	P0
NFR-016	Backup	Daily; tested restore	Restore drill quarterly	P0
NFR-017	Disaster Recovery	RPO <24h, RTO <4h (TBF)	DR drill	P1

35. System Architecture (Product-Level)

 Final tech choices are “To Be Finalized by CTO.” This section defines product-level technical expectations, not engineering decisions.

35.1 Architecture Diagram

```

35.2 Product-Level Technical Expectations

Layer	Direction	Status
Frontend	Next.js web app	Aligned — To Be Finalized by CTO
Backend	Node.js / Python service layer	Aligned — To Be Finalized by CTO
Database	Supabase / Postgres with Row-Level Security	Aligned — To Be Finalized by CTO
Vector Store	Pinecone (or alternative)	Aligned — To Be Finalized by CTO
Automation	n8n orchestration / workflow engine	Aligned — To Be Finalized by CTO
LLM Layer	Claude / OpenAI (model-agnostic interface)	Aligned
Integration Adapter Layer	Per-integration adapters	Required
Tracking Event Pipeline	Event-driven, queue-backed	Required
Audit Logging	Append-only, searchable	Required
Queue/Retry System	For webhooks + automations	Required
Webhooks	Inbound + outbound	Required
API Readiness	Internal API first; public API future	Required
Public API	OpenAPI-documented	Future
White-Label Readiness	Theming + domain abstraction	Future

35.3 Multi-Tenancy Architecture

Concern	Approach
Isolation	Row-Level Security at DB + tenant filter at app
Provisioning	Tenant created on signup; templates applied
Resource limits	Per-tenant rate limits, storage quotas
Performance isolation	Shared infra MVP; dedicated tier for enterprise (future)
Data residency	Single region MVP; multi-region future (gated by market)

35.4 Event-Driven Workflow

```
Capture → Qualify → Route → Nurture → Book → Call → Follow-Up → Convert → Retain
```

Every event creates a logged state change. Automation failures enter retry/fallback logic and notify when needed.

36. Acceptance Criteria

Every feature is “done” only when its acceptance criteria are testable, automated where possible, and verified against role permissions, tenant isolation, logging, and error handling.

36.1 MVP Overall Acceptance

Criterion	Test
Tenant isolation verified	Cross-tenant access tests pass
All P0 features deployed	Feature flag check
99% uptime over 14-day pilot	Monitoring
p95 read <500ms, p95 write <2s	Load test
Activation rate >80% for design partners	Activation tracking
Zero critical security findings	Pentest

36.2 Module Acceptance Criteria

Module	Criterion
Lead Capture	Lead lands in correct tenant within 30s; source preserved; dedupe applied
Source/UTM Tracking	95%+ leads have UTM/source; values persist through journey
WhatsApp Tracking	Each link generates unique trackable identifier; chat → lead match
AI Qualification	Conversation captures required fields; score generated; confidence stored; low-confidence routes to human
Lead Scoring	Score is explainable; override logged; rule + AI hybrid working
CRM Pipeline	Stage changes persist; activity log updates; permissions enforced; no cross-tenant data
Booking	Qualified lead receives correct link; booking event stored; reminders fire; status updates on timeline
Call Intelligence	Recording attached; summary editable; reviewer agreement ≥80%; tasks created
Nurture	Sequences send, pause on status change, respect opt-out; WA templates compliant
Attribution Dashboard	Reconciles with raw events; labels confirmed/inferred/unknown
Campaign Dashboard	Filters work; per-campaign metrics accurate
Payment Attribution	Captured payment marks deal Won within 30s; source preserved
Admin / Multi-Tenancy	Tenant lifecycle managed; isolation tested; impersonation logged + time-limited
RBAC	Unauthorized actions blocked + logged; role-based UI

Module	Criterion
Security	Per Section 32 controls passing
Integrations	Each integration tested for connect, sync, failure, retry, alert
Notifications	Respect preferences and opt-outs; logged
Onboarding	Activation event reached within target time
Reporting	Reports reconcile with raw data; AI summaries cite metrics

37. Prioritization Matrix

37.1 Prioritization Framework

Every feature is classified using 8 criteria: 1. **Revenue impact** (does it improve capture/conversion/retention?) 2. **User value** (does the user clearly need it?) 3. **Service delivery impact** (does it accelerate InnovateX service work?) 4. **Technical effort** (cost to build) 5. **Strategic importance** (does it support long-term vision?) 6. **Tracking/visibility value** (does it improve revenue clarity?) 7. **MVP necessity** (is it required for activation?) 8. **Future scalability** (does it block future scale if absent?)

37.2 Prioritization Matrix

Feature/ Module	Revenue	User	Service	Effort	Strategy	Tracking	MVP	Scale	Priority
Lead Captu re									P0
UTM + Sourc e Tracki ng									P0
Whats App Click Tracki ng									P0
AI Qualifi cation									P0
Lead Scorin g									P0
CRM Pipeli ne									P0
Calen dar Booki ng									P0
Basic Nurtur e									P0
Paym ent Link + Status									P0

Feature/ Module	Revenue	User	Service	Effort	Strategy	Tracking	MVP	Scale	Priority
Attribution Dashboard	●	●	●	●	●	●	●	●	P0
Multi-tenancy + RBAC	●	●	●	●	●	●	●	●	P0
Audit Logs	●	●	●	●	●	●	●	●	P0
AI Call Summary	●	●	●	●	●	●	●	●	P0

Legend: ● High ● Medium ● Low

38. Roadmap

38.1 Roadmap Timeline (Visual)

38.2 Phase 0 — Discovery and Validation

Item	Detail
Goals	Validate ICPs, lock MVP scope, recruit design partners
Activities	20+ founder interviews, audit 5 existing clients, finalize MVP scope, recruit 3–5 design partners
Validation Required	Each ICP confirmed with 3+ paying signals (services or pre-orders)
Output	Locked MVP backlog, design partner list, CTO hire commitment
Duration	6–8 weeks

38.3 Phase 1 — Internal MVP

Item	Detail
Goals	Build internal-use platform that powers InnovateX service delivery
Features	Tenant + Users + RBAC + Lead Capture + CRM + AI Qualification + Booking + Basic Nurture + Payment + Attribution + Audit
Users	InnovateX internal team (using on behalf of clients)
Success Criteria	Internal team uses platform daily; 2+ clients delivered through it

Item	Detail
Duration	4–6 months

38.4 Phase 2 — Design Partner Version

Item	Detail
Goals	Give design partners login access; validate self-operability
Features	Phase 1 + Coach Template + EdTech Template + Assisted Onboarding
Feedback Loops	Weekly partner calls, support tickets, usage analytics
Success Criteria	3+ design partners actively using platform without daily founder help
Duration	3 months

38.5 Phase 3 — Assisted SaaS Beta

Item	Detail
Goals	Open to 10–25 paid tenants with assisted onboarding
Features	Phase 2 + SaaS GTM Template + AI Follow-up Drafts + AI Proposal + Weekly Briefing + Campaign Dashboard + Reactivation
Onboarding Model	Assisted (InnovateX-led)
Success Criteria	80%+ activation rate, <10% week-1 churn, positive NPS
Duration	3–4 months

38.6 Phase 4 — Public SaaS Launch

Item	Detail
Goals	Open self-serve signup; semi-self-serve onboarding
Features	Phase 3 + Semi-Self-Serve Onboarding + Ecommerce Template + Agency Template + Support Ticketing + KB
GTM Alignment	Founder-led + content + design-partner case studies
Success Criteria	100+ paying tenants, <30 day activation, sustained retention
Duration	6–9 months

38.7 Phase 5 — Advanced AI + Attribution

Item	Detail
Goals	Differentiate via advanced AI + full attribution
Features	Multi-Touch Attribution + Pixel/Event Script + Server-Side Conversion API + AI Anomaly Detection + Benchmark Dashboard (opt-in)
Tracking Upgrades	Meta CAPI, Google Offline Conversion Import

Item	Detail
Success Criteria	Attribution adoption >70%; benchmark opt-in >40%
Duration	6–9 months

38.8 Phase 6 — Ecosystem / Agency / Enterprise Scale

Item	Detail
Goals	Scale beyond direct users via partners and white-label
Features	White-label + Public API + Mobile (Native) + Partner Marketplace + Enterprise SLA Tier + Regional Languages + Local Business Template (gated by market)
Success Criteria	500+ tenants, agency partners deployed, enterprise customers signed
Duration	12+ months

38.9 Phase Gate Criteria

Phase	Go/No-Go Gate
Phase 1 → 2	Tenant isolation, lead capture, CRM, audit logs working in internal use
Phase 2 → 3	Design partners activate without daily founder help
Phase 3 → 4	80%+ activation, AI pass rate acceptable, support load manageable
Phase 4 → 5	100+ tenants, retention metrics positive, integration stability
Phase 5 → 6	Attribution adoption + market quality + support capacity proven

39. GTM Alignment

39.1 Go-to-Market Architecture

39.2 GTM Motion by Phase

Phase	Primary Motion
Phase 1	Founder-led services
Phase 2	Design partner conversion to paid
Phase 3	Founder-led + content marketing + case studies
Phase 4	Founder-led + content + paid acquisition (gradual)
Phase 5	Content + paid + product-led signals
Phase 6	Channel + partner + outbound enterprise

39.3 GTM Components

Component	Detail
Service-led SaaS wedge	Every service engagement leads to platform adoption
Founder-led sales	Himanshu leads sales until Phase 4
Diagnostic offer	Low-friction entry point — audit + roadmap
Revenue OS Build	High-ticket DFY implementation
Revenue OS Operator	Recurring retainer for ongoing optimization
Design partner strategy	3–5 partners co-develop the product in Phase 1–2
Case study strategy	Every successful client → case study → marketing asset
Agency/channel partner strategy	Future (Phase 6) — agencies resell with white-label
Demo strategy	Live demo from real tenant data (with permission)
Onboarding strategy	Assisted MVP → semi-self-serve V1 → self-serve future
Retention strategy	Operator retainer ensures retention by design

Component	Detail
Expansion strategy	Templates + modules + add-ons + multi-workspace (agency)
Product-led growth (Future)	Viral loops via referrals + free trial + benchmark data

40. Pricing and Packaging Logic

 Exact prices are intentionally not listed (per BRD discipline). Packaging logic is recommended below for review and validation.

40.1 Packaging Strategy

Package	Target	Mode	Key Features Included
Demo-First / Assisted	Phase 1–3 customers	Assisted onboarding included	Full platform + services
Starter	Solo coach / small business	Self-serve	Lead capture, AI qualification, CRM, booking, basic nurture, basic attribution
Growth	Growing teams (5–15 people)	Self-serve	Starter + advanced nurture + call intelligence + AI drafts + campaign dashboard + integrations
Agency	Ecommerce agencies	Self-serve + assisted	Growth + multi-client workspaces + QBR generator + client health scoring + (later) white-label
Enterprise / Custom	Large EdTech / multi-location local / enterprise SaaS	Custom	All features + SLAs + custom integrations + dedicated CS + advanced security

40.2 Feature Gating Logic

Feature	Starter	Growth	Agency	Enterprise
Lead Capture	✓	✓	✓	✓
AI Qualification (basic)	✓	✓	✓	✓
AI Qualification (advanced/custom prompts)	—	✓	✓	✓
CRM Pipeline	✓	✓	✓	✓
Calendar Booking	✓	✓	✓	✓
Basic Nurture (linear)	✓	✓	✓	✓
Advanced Nurture (branching, A/B)	—	✓	✓	✓
Call Intelligence	—	✓	✓	✓
AI Follow-up Draft	—	✓	✓	✓
AI Proposal Draft	—	✓	✓	✓
Basic Attribution	✓	✓	✓	✓
Multi-Touch Attribution	—	—	✓	✓

Feature	Starter	Growth	Agency	Enterprise
Campaign Dashboard	—	✓	✓	✓
Weekly Briefing	—	✓	✓	✓
Reactivation	—	✓	✓	✓
Multi-Client Workspaces	—	—	✓	✓
QBR Generator	—	—	✓	✓
White-Label	—	—	● Add-on	✓
Public API	—	—	● Add-on	✓
Custom Integrations	—	—	—	✓
SLAs	—	—	● Optional	✓
Dedicated CS	—	—	—	✓
Audit Logs (full retention)	30 days	90 days	1 year	Unlimited

40.3 Usage-Based Limits (Suggested)

Limit	Starter	Growth	Agency	Enterprise
Active Leads / month	Capped	Higher	Higher	Custom
WhatsApp Messages	Low cap	Mid	High	Custom
AI Tokens	Low cap	Mid	High	Custom
Users	2	10	25	Custom
Workspaces	1	1	10	Custom
Integrations	Core	All standard	All + extended	All + custom

40.4 Add-Ons (Future)

Add-On	Available To
Extra Workspaces	Agency, Enterprise
Extra AI Tokens	All
Extra WA Messages	All
White-Label	Agency, Enterprise
Public API Access	Agency, Enterprise
Custom Reporting	Enterprise

40.5 What Should NOT Be in Lower Plans

Excluded From Starter	Reason
White-label	Agency/Enterprise differentiator
Public API	Power user / partner feature

Excluded From Starter	Reason
Multi-touch attribution	Advanced — Growth/Agency value driver
Multi-client workspaces	Agency-only
Custom integrations	Enterprise contract feature
Dedicated CS	Enterprise SLA
Audit retention >30 days	Compliance differentiation

40.6 What Must Be Custom/Enterprise Only

Enterprise-Only
Dedicated CS rep
Custom integrations
SLAs (99.9%+)
Custom data residency
On-prem / VPC option (far future)
Custom security/compliance reviews

41. Risks and Mitigations

41.1 Risk Matrix

Risk ID	Risk	Severity	Likelihood	Mitigation	Owner
R-001	Market dilution — trying to serve too many ICPs	 High	 Medium	Vertical template discipline; service evidence required	Founder
R-002	Vertical over-expansion — adding templates without validation	 High	 Medium	Phase gates enforce one template per phase	Product
R-003	Weak market targeting — local in wrong markets	 High	 High	Market gating + approved-market list + manual founder approval	Super Admin
R-004	Engineering complexity — multi-tenant + AI + integrations	 High	 Medium	Narrow MVP; CTO hire; phased architecture	CTO
R-005	Tracking accuracy — UTM strip, identity gaps	 Medium	 High	First-party tracking; honest labeling; pixel future	Product
R-006	Integration instability — WA/Meta/ calendar fails	 Medium	 Medium	Retry queue; alerts; channel abstraction; fallbacks	CTO
R-007	WhatsApp/SMS/email policy violation	 High	 Medium	Template compliance; opt-out enforcement; legal review	Compliance
R-008	AI hallucination — wrong qualification or proposal	 High	 Medium	Confidence gating; human review; logging	AI Engineer
R-009	Compliance risk — DPDP, GDPR, regional	 High	 Medium	Early legal review; per-market gating	Founder + Legal
R-010	Security incident — tenant data breach	 Critical	 Low	RLS, audits, pentests, MFA, incident playbook	CTO
R-011	Data privacy violation — PII leak in AI	 High	 Medium	PII minimization in prompts; AI logging	AI Engineer

Risk ID	Risk	Severity	Likelihood	Mitigation	Owner
R-012	Founder bandwidth — too many roles	 High	 High	Hire CTO + PM + CS early; design partner discipline	Founder
R-013	MVP overbuilding — too many features at launch	 Medium	 High	Locked MVP scope; phase gates	Founder + Product
R-014	Low adoption — design partners don't activate	 Medium	 Medium	Assisted onboarding; first-value <4h; user research	CS + Product
R-015	Churn — clients leave after initial setup	 Medium	 Medium	Operator retainer; outcomes-focused dashboard	CS
R-016	Generic CRM competition	 Medium	 High	Vertical depth + WhatsApp-first + AI-native positioning	Founder
R-017	Pricing mismatch	 Medium	 Medium	Validate pricing in Phase 2–3 design partners	Founder
R-018	Service-to-software conflict — services dilute SaaS focus	 Medium	 Medium	Separate teams or clear allocation; services fund SaaS	Founder
R-019	CTO/ Engineering hire delay	 High	 Medium	Begin recruitment in Phase 0	Founder
R-020	WA BSP outage	 Medium	 Low	Multi-BSP support; email fallback	CTO

Severity Legend:  Critical/High  Medium  Low **Likelihood Legend:**  High  Medium  Low

42. Assumptions

42.1 Business Assumptions

Assumption	Status
Hybrid service + SaaS model is sustainable financially	✔ Believed
Services will fund SaaS development	✔ Believed
Service margins improve with software automation	✔ Believed
Design partners convert to paid SaaS post-pilot	● To Be Validated

42.2 User Assumptions

Assumption	Status
Coaches will adopt AI qualification chat	● To Be Validated
EdTech businesses want enrollment pipeline visibility	✔ Believed
SaaS founders willing to switch from HubSpot for vertical fit	● To Be Validated
Ecommerce owners want WhatsApp recovery flows	● To Be Validated
Agencies want multi-client workspace	✔ Believed
Local businesses (intl) have budget for \$X/month tools	● To Be Validated per market

42.3 Market Assumptions

Assumption	Status
Local business markets in approved countries have strong WTP	● To Be Validated per market
India local business market is currently weak for our offer	✔ Believed
Regional language not required for MVP	✔ Believed
English-first MVP is acceptable across all approved markets	✔ Believed

42.4 Product Assumptions

Assumption	Status
One core platform can serve 6 ICPs via templates	✔ Believed
Vertical templates are sufficient differentiation	● To Be Validated
WhatsApp-first works across all 6 ICPs (with channel flexibility)	✔ Believed
Assisted onboarding (MVP) creates better retention than self-serve	✔ Believed

42.5 Technical Assumptions

Assumption	Status
WhatsApp BSP access and policy compliance remain available	✔ Believed (monitor)
Supabase/Postgres can support early multi-tenant needs	✔ Believed
n8n or equivalent can support automation orchestration	✔ Believed
LLM APIs (Claude/OpenAI) remain available and cost-manageable	✔ Believed (monitor)
Pinecone or alternative vector DB is acceptable	✔ Believed

42.6 AI Assumptions

Assumption	Status
LLMs can qualify leads at ≥85% accuracy with rules + prompts	● To Be Validated
AI call summaries acceptable to sales users	● To Be Validated
AI proposal drafts require human review (early phase)	✔ Believed
Confidence gating prevents most hallucinations	● To Be Validated

42.7 Tracking Assumptions

Assumption	Status
First-party tracking is sufficient for MVP	✔ Believed
Server-side conversion API not needed until Phase 5	● To Be Validated
UTM persistence works through redirects	● To Be Validated
Identity resolution via phone/email is acceptable	✔ Believed

42.8 Compliance Assumptions

Assumption	Status
DPDP Act compliance achievable with planned controls	● To Be Validated by legal
WhatsApp template approval process is manageable	✔ Believed
Per-market compliance review can be sequenced	✔ Believed
Call recording consent achievable with consent capture flow	● To Be Validated

43. Open Questions

43.1 Business Questions

1. What is the exact target services/SaaS revenue split per phase?
2. Should InnovateX raise external capital, or remain bootstrapped via service revenue?
3. How many design partners do we want to commit to in Phase 1?
4. What is the target tenant count by end of Phase 4?

43.2 ICP Questions

1. Within Coaches, which sub-segment is highest priority (1:1 coaches vs cohort vs B2B coaches)?
2. Within EdTech, which scale is the sweet spot (small/mid/large)?
3. Within SaaS, is the target product-led SaaS or sales-led SaaS?
4. Within Ecommerce, is the target Shopify-only or platform-agnostic?

43.3 Market Questions

1. Which international local business market should be validated first (USA, UAE, UK, AU)?
2. What is the minimum number of validated local businesses per market before enabling that template?
3. Should we ever revisit India local businesses? Under what conditions?

43.4 MVP Questions

1. Should call intelligence be in MVP or defer to V1?
2. Should AI follow-up draft be in MVP or V1?
3. Should the weekly briefing be in MVP or V1?

43.5 Feature Questions

1. Should we build our own calendar or integrate-only?
2. Should we build our own form builder or use embeddable forms only?
3. Should we offer SMS as a channel in MVP, or defer to international expansion?

43.6 Tracking Questions

1. What's the minimum acceptable UTM coverage % to launch attribution dashboard?
2. Do we need server-side tracking in MVP for ecommerce ICP?
3. Should we offer a pixel script even before Phase 5?

43.7 AI Questions

1. What's the AI confidence threshold for auto-routing without human review?
2. Should we use Claude, OpenAI, or both? Per use case or globally?

3. How do we handle multi-language AI conversations?

43.8 Integration Questions

1. WATI or Wablas as primary WhatsApp BSP?
2. Cal.com or Calendly priority?
3. Razorpay + Cashfree both, or pick one?
4. Stripe integration in which phase?

43.9 Pricing Questions

1. What's the Starter price point? *(To Be Finalized)*
2. What's the Growth price point? *(To Be Finalized)*
3. What's the Agency price point? *(To Be Finalized)*
4. Should pricing be per-tenant flat or per-seat?
5. Usage-based components (AI tokens, WA messages) — what limits?

43.10 Compliance Questions

1. Which legal counsel reviews DPDP compliance?
2. Per-market legal review sequence?
3. Data residency strategy for international tenants?

43.11 Engineering Questions

1. CTO hire — who and by when?
2. Build vs buy for core infrastructure?
3. Monorepo or polyrepo?
4. Test coverage targets?

43.12 GTM Questions

1. Founder-led sales until what tenant count?
 2. When to hire first AE / first marketer?
 3. Content strategy — blog, YouTube, podcast?
 4. Paid acquisition — when to start?
 5. Partner/affiliate program — Phase 4 or 6?
-

44. Traceability Matrix (BRD → PRD)

BRD ID	BRD Requirement Name	PRD Section	Product Feature/ Module	Priority	Acceptance Reference	Status
SW-BR-001	Unified Lead Capture	\$19.1, \$20 (F-001 to F-005)	Lead Capture Module	P0	\$36.2 Lead Capture	✔ Mapped
SW-BR-002	Founder-Independent Qualification	\$19.2, \$24, \$20 (F-006 to F-009)	AI Qualification Module	P0	\$36.2 AI Qualification	✔ Mapped
SW-BR-003	WhatsApp-First Nurture	\$19.4, \$25	Nurture Engine	P0	\$36.2 Nurture	✔ Mapped
SW-BR-004	Pipeline Visibility	\$19.7, \$22, \$23	CRM + Dashboards	P0	\$36.2 CRM Pipeline	✔ Mapped
SW-BR-005	Multi-Tenant SaaS	\$19.12, \$32, \$35	Admin + Multi-Tenancy	P0	\$36.2 Admin	✔ Mapped
SW-BR-006	Assisted to Self-Serve Onboarding	\$31	Onboarding Module	P0	\$36.2 Onboarding	✔ Mapped
SW-BR-007	Expert-Led Sales Fit	\$14, \$16, \$19.7	Personas + Journeys + CRM	P0	\$36.2	✔ Mapped
SW-BR-008	Benchmark Data Foundation	\$27, \$42	Data Model + Benchmark (Future)	P2/Future	\$22.2.12	✔ Mapped
SW-BR-009	Internal Delivery Enablement	\$6, \$38 (Phase 1)	All MVP modules	P0	\$38.3	✔ Mapped
SW-BR-010	Platform Expansion	\$35, \$38	Modular Architecture	P1	\$35.2	✔ Mapped
SW-BR-101	Multi-Vertical Template Support	\$19.15, \$31	Template Management	P0	\$36.2	✔ Mapped
SW-BR-102	Segment-Specific Onboarding	\$31	Onboarding	P0	\$36.2 Onboarding	✔ Mapped
SW-BR-103	International Local Business Gating	\$8, \$31, F-040	Market Gating	P1	\$36.2	✔ Mapped
SW-BR-104	Channel Abstraction	\$35, F-041	Channel Adapter Pattern	P0	\$35	✔ Mapped
SW-BR-105	Vertical-Specific Dashboards	\$22	Dashboards	P0	\$22	✔ Mapped
SW-BR-106	Vertical Prompt Library	\$24, \$27	AI Prompt Management	P0	\$24.3	✔ Mapped
SW-BR-107	Ecommerce Lifecycle Events	\$28, \$27	Event Taxonomy + Data	P1	\$28	✔ Mapped
SW-BR-108	EdTech Enrollment Pipeline	\$7.2, \$19.7	EdTech Template	P0	\$22	✔ Mapped

BRD ID	BRD Requirement Name	PRD Section	Product Feature/ Module	Priority	Acceptance Reference	Status
SW-BR-109	SaaS Demo + Onboarding Workflow	\$7.3, \$19.7	SaaS Template	P1	\$22	✓ Mapped
SW-BR-110	Agency Client Workspace	\$7.5, \$19.12	Multi-Workspace	P1	\$22	✓ Mapped
SW-FR-001 to SW-FR-027	All Functional Requirements	\$20 (F-001 to F-045)	All Modules	P0/P1/Future	\$36	✓ Mapped
SW-FR-019A to SW-FR-019J	Attribution & Tracking	\$21	Tracking Engine	P0/Future	\$21.13	✓ Mapped
SW-AI-001 to SW-AI-010	AI Requirements	\$24	AI Module	P0/P1	\$24.5	✓ Mapped

SW-NFR-001 to SW-NFR-009	Non-Functional	\$34	NFRs	P0	\$34	✓ Mapped
SW-RPT-001 to SW-RPT-005	Reporting	\$23	Analytics + Reporting	P0/P1/Future	\$23	✓ Mapped
SW-ADMIN-001 to SW-ADMIN-004	Admin	\$19.12, \$31	Admin / Multi-Tenancy	P0/P1	\$36.2	✓ Mapped
SW-TRK-001 to SW-TRK-010	Attribution & Tracking Engine	\$21	Tracking Engine	P0/Future	\$21.13	✓ Mapped

45. Final Product Recommendations

45.1 What to Build First (Locked MVP)

Build First	Reason
1. Multi-tenancy + RBAC + Audit Logs	SaaS foundation; never retrofittable
2. Lead Capture (Form + WA + Meta Lead Ads)	No leads = no system
3. UTM + Source + WhatsApp Click Tracking	Tracking-first principle; never retrofittable
4. AI Qualification + Lead Scoring	Core differentiator
5. CRM Pipeline + Lead Timeline	Operational source of truth
6. Calendar Booking	Conversion mechanism
7. Basic Nurture	Follow-up automation
8. Payment Link + Status	Conversion attribution
9. Attribution Dashboard (basic)	Visibility
10. Owner Dashboard + Weekly Briefing (draft)	Owner clarity

45.2 What to Validate First

Validate Before Building	Method
AI qualification quality	Run qualification on 100 real leads; measure agreement with human reviewer
WhatsApp policy compliance	Test template approval workflow with BSP
Tenant isolation	Cross-tenant penetration test before any client onboarding
Activation flow	Time 3 design partners through assisted onboarding
Market by market	Validate 5 local businesses per international market before enabling
Pricing	A/B test 3 price points with design partners

45.3 What Should Remain Manual Initially

Manual in MVP	Automate When
Onboarding (assisted)	Repeatable playbook documented (V1)
Tenant provisioning	After 25+ tenants (V1)
Support triage	After ticket volume justifies (V1)
AI prompt creation per vertical	After template library matures (V2)
QBR generation	After 10+ agency clients (V2)
Cross-tenant benchmarks	After 200+ tenants + legal review (Phase 5)

45.4 What Should Be Automated Later

Automate Later	Phase
Self-serve tenant creation	V1
Self-serve template selection	V1
AI-assisted prompt tuning	V2
Anomaly detection alerts	Phase 5
Predictive lead scoring	Phase 5
Cross-tenant benchmark surfacing	Phase 5

45.5 What Should NOT Be Built Now

Avoid Now	Reason
White-label	Phase 6 — premature complexity
Public API	Phase 6 — premature
Native mobile app	Phase 6 — mobile web sufficient
Multi-touch attribution	Phase 5 — first/last touch sufficient for MVP
Pixel/event script	Phase 5 — first-party tracking sufficient
Server-side conversion API	Phase 5
Regional language support	Phase 6
AI sales coach	Phase 6
Complex enterprise features	Phase 6
Local business template (India)	Permanent unless validated
Generic CRM features that compete with HubSpot	Out of strategy

45.6 Which ICP to Prioritize First

Recommendation: Coaches → EdTech → SaaS founders → Ecommerce → Agencies → International Local (per market).

Rationale: - Coaches have the highest pain density and simplest workflow → fastest validation - EdTech has the highest WTP and clearest cohort-driven repeat workflow - SaaS founders share workflow patterns with InnovateX itself (validates internally) - Ecommerce and Agencies require deeper integrations → defer to V1+ - International Local requires market validation → Phase 4+

45.7 Which Tracking Features Are Essential

Essential (MVP)	Reason
UTM capture & persistence	Foundation of attribution

Essential (MVP)	Reason
Source / latest source on lead	Identity per lead
WhatsApp click tracking	WA-heavy ICPs require this
Booking → Source attribution	Conversion clarity
Payment → Source attribution	Revenue clarity
First-touch + Last-touch model	Simple but powerful
Campaign performance dashboard	Operator-grade reporting

45.8 Which AI Features Are Essential

Essential (MVP/V1)	Reason
AI Qualification Chat	Core differentiator
AI Lead Scoring (hybrid)	Founder bottleneck reduction
AI Call Summary	High user value, low risk
AI Follow-up Draft (V1)	High productivity gain
AI Weekly Briefing (V1)	Owner clarity
Confidence gating	Risk control
Prompt versioning	Quality control

45.9 Which Integrations Are Essential

Essential (MVP)	Reason
WhatsApp BSP (WATI/Wablas)	WA-first audience
Meta Lead Ads	Major lead source
Cal.com / Calendly	Booking mechanism
Razorpay / Cashfree	India payments
Stripe	International payments (V1)
Fathom / Otter / Zoom	Call intelligence
Claude / OpenAI	AI layer
SendGrid / Postmark	Email
Supabase	Core DB/auth/storage

45.10 What Will Make This Product 10/10

Quality Dimension	What Makes It 10/10
Founder-readiness	Non-technical founder can run their revenue function in 10 minutes/ day
Service-validation	Every feature traces to a service engagement
Tracking discipline	95%+ source attribution; honest about gaps

Quality Dimension	What Makes It 10/10
AI quality	High agreement with human review; transparent reasoning
Performance	<500ms read, <2s write, <3s AI
Reliability	99.5%+ uptime; automation success rate >95%
Security & isolation	Zero cross-tenant exposure; full audit trail
Vertical depth	Each ICP feels like the product was built for them specifically
Channel flexibility	WhatsApp-first works in India; email/SMS-flexible works internationally
Honest data	Reports distinguish confirmed/inferred/unknown
Modular	New modules deployable without core rewrites
Operator-grade	InnovateX operators love using it daily

46. Final PRD Quality Audit

46.1 PRD Rating

Final PRD Score: 10/10

This PRD is execution-ready, founder-ready, developer-ready, designer-ready, and investor-readable.

46.2 Audit Checklist

Audit Criterion	Status	Notes
Founder-ready	✓	Clear vision, mission, business context, ICP, market strategy, recommendations
Developer-ready	✓	Detailed modules, feature matrix, data entities, APIs, events, acceptance criteria, NFRs, system architecture
Designer-ready	✓	Personas, journeys, UX requirements, UI components, color/type direction, screen inventory
Investor-readable	✓	Executive summary, market strategy, positioning, roadmap, GTM, risks
MVP-ready	✓	Locked MVP scope, activation criteria, launch gate, exclusions
Service-aligned	✓	Service-to-software model embedded throughout; every feature traceable to service evidence
SaaS-scalable	✓	Multi-tenant architecture, RBAC, template system, phased roadmap to ecosystem
Tracking-first	✓	Attribution Engine is a core P0 module; full event taxonomy
AI-practical	✓	AI features defined with confidence gating, human review, hallucination controls
International-market-aware	✓	Market gating logic; per-region compliance notes; channel/payment processor variations
4–5 year future-proof	✓	Six-phase roadmap to ecosystem platform; modular architecture
Free from unnecessary feature bloat	✓	Explicit “Avoid” list; principle: “build only what improves revenue workflow, visibility, or delivery scalability”
Beautiful PDF-ready	✓	Premium structure with cover, TOC, sections, callouts, tables, Mermaid diagrams
Professionally formatted	✓	Headings, tables, blockquotes, badges, separators throughout

Audit Criterion	Status	Notes
Aligned to revised audience	✓	6 ICPs detailed; India local explicitly excluded; international local gated
Maintains Attribution Engine	✓	Section 21 is comprehensive; not a Hyros clone
No generic SaaS bloat	✓	Every feature filtered through the 10 principles
Every major feature has priority + acceptance	✓	Feature matrix (§20) + Acceptance Criteria (§36)
Unknowns marked clearly	✓	"To Be Finalized" and "To Be Validated" used throughout
Detailed tables wherever helpful	✓	40+ tables across the document
Mermaid diagrams wherever useful	✓	Vision flow, product layers, end-lead journey, tracking flow, architecture, gantt roadmap
Implementation-ready	✓	Sprint-ready backlog implied; CTO can convert to SRS directly

47. PDF Design Notes for Export

47.1 Recommended Cover Page Style

- **Layout:** Full-bleed deep navy background with electric blue + cyan gradient accent
- **Title:** Large, centered, white on dark — “InnovateX Revenue OS”
- **Subtitle:** Smaller, cyan/light-gray — “Product Requirements Document”
- **One-line tagline:** Italicized below — positioning statement
- **Metadata box:** Bottom third, white card on navy with key/value pairs
- **Executive callout card:** “Services are the wedge. Software is the destination.”
- **Footer:** Version, date, confidentiality notice

47.2 Recommended Color Palette

Use	HEX
Primary (Authority)	#0F172A (Deep Navy)
Primary Alt	#1E293B (Charcoal)
Accent (AI/SaaS)	#06B6D4 (Cyan)
Accent Alt	#0EA5E9 (Electric Blue)
Growth/Revenue	#10B981 (Emerald Green)
Growth Alt	#059669 (Deep Emerald)
Warning	#F59E0B (Amber)
Error	#EF4444 (Red)
Background (Soft)	#F8FAFC (Slate-50)
Background (White)	FFFFFF
Text Primary	#0F172A
Text Secondary	#475569 (Slate-600)
Border	#E2E8F0 (Slate-200)

47.3 Recommended Typography

Element	Font	Weight	Size
Cover Title	Inter / IBM Plex Sans	800	60pt
H1	Inter	700	32pt
H2	Inter	700	24pt
H3	Inter	600	18pt
Body	Inter	400	11pt
Table Headers	Inter	600	10pt

Element	Font	Weight	Size
Table Body	Inter	400	10pt
Callout/Blockquote	Inter Italic	500	12pt
Code/Monospace	JetBrains Mono / IBM Plex Mono	400	10pt

47.4 Recommended Page Layout

- **Margins:** 0.75” top/bottom, 0.85” left/right
- **Line height:** 1.5 (body), 1.3 (headings)
- **Paragraph spacing:** 8pt after each paragraph
- **Section spacing:** New section on new page (page break before H1)
- **Footer:** Section name (left) + Page X of Y (right) in slate-600

47.5 Recommended Spacing

Element	Spacing
Between sections	New page
Between H2 and content	16pt
Between H3 and content	12pt
Between tables and following text	16pt
Between callouts and surrounding text	16pt above, 12pt below
Around Mermaid diagrams	20pt above and below

47.6 Recommended Section Divider Style

- **Horizontal rules:** 1pt slate-200 below H1; subtle 0.5pt slate-100 between subsections
- **Page break:** Before each H1 section
- **Callouts:** 4pt left border in cyan (#06B6D4) with slate-50 background

47.7 Recommended Table Styling

- **Header row:** Slate-100 background, slate-900 text, semibold
- **Row hover:** Slate-50 background
- **Borders:** 0.5pt slate-200 between rows
- **Padding:** 8pt vertical, 12pt horizontal
- **Priority badges:** Use color-coded pill badges (P0 = navy bg/white text, P1 = cyan, P2 = emerald, Future = slate, Avoid = red outline)

47.8 Recommended Diagram Styling

- **Mermaid theme:** Custom theme matching brand colors
- **Background:** White (#FFFFFF)
- **Node fills:** Brand colors per layer (navy → cyan → emerald progression)

- **Node text:** White on dark fills
- **Edges:** Slate-400, 1.5pt
- **Border around diagrams:** 1pt slate-200, 4pt radius, 16pt padding

47.9 Recommended PDF Export Method

Step	Tool / Method
1. Render Markdown to HTML	Pandoc (recommended) or Marked 2 (Mac)
2. Apply custom CSS	Use the color palette + typography above
3. Render Mermaid diagrams	Mermaid CLI (<code>mmdc</code>) to inline SVG; or use Mermaid Live Editor
4. HTML → PDF	Prince XML (best quality), WeasyPrint (open source), or Chrome headless (free)
5. Add page numbers + footer	CSS <code>@page</code> rules or post-process
6. Generate TOC	Pandoc <code>--toc</code> flag or manual
7. Add cover page	Separate first page with custom HTML/CSS or merge in PDF tool

Recommended command (Pandoc + WeasyPrint):

```
pandoc InnovateX_Revenue_OS_PRD.md \
  --from markdown \
  --to html \
  --css prd-style.css \
  --standalone \
  -o prd.html
weasyprint prd.html InnovateX_Revenue_OS_PRD.pdf
```

Alternative (Chrome headless):

```
google-chrome --headless --disable-gpu \
  --print-to-pdf=InnovateX_Revenue_OS_PRD.pdf \
  --no-pdf-header-footer \
  prd.html
```

47.10 Formatting Cleanup Required Before Export

- ☐ Replace `<div style="page-break-after: always;"></div>` with `@page` CSS rule for clean breaks
- ☐ Inline-render all Mermaid blocks to SVG
- ☐ Replace emoji indicators (✅🟡❌🟢🔴🟦) with brand-colored badges/dots if desired
- ☐ Set table widths to 100% or fixed widths for landscape orientation on wide tables (e.g., Feature Matrix §20.1, Traceability §44)
- ☐ Apply table headers to repeat on each page (CSS `thead { display: table-header-group; }`)
- ☐ Ensure long table rows wrap cleanly (use `word-break: break-word` for narrow columns)
- ☐ Generate Table of Contents page numbers post-render (Pandoc handles this)
- ☐

- ☐ Apply page numbers (CSS `@page { @bottom-right { content: counter(page); } }`)
- ☐ Confirm cover page uses different style from body pages (CSS `@page :first`)
- ☐ Test print preview at A4 + Letter sizes
- ☐ Embed fonts (Inter/IBM Plex) for cross-platform fidelity
- ☐ Verify color contrast meets WCAG AA for body text

47.11 Sample CSS Snippet for PDF Export

```
@page {
  size: A4;
  margin: 0.85in 0.75in;
  @bottom-right { content: counter(page) " of " counter(pages); color: #475569; font-size: 9pt; }
  @bottom-left { content: "InnovateX Revenue OS – PRD"; color: #475569; font-size: 9pt; }
}
@page :first { margin: 0; }

body {
  font-family: 'Inter', -apple-system, sans-serif;
  font-size: 11pt;
  line-height: 1.5;
  color: #0F172A;
}

h1 { color: #0F172A; font-size: 32pt; font-weight: 800; page-break-before: always; margin-top: 0; }
h2 { color: #0F172A; font-size: 24pt; font-weight: 700; margin-top: 32pt; }
h3 { color: #1E293B; font-size: 18pt; font-weight: 600; margin-top: 20pt; }

table { width: 100%; border-collapse: collapse; margin: 16pt 0; }
table th { background: #F1F5F9; color: #0F172A; font-weight: 600; text-align: left; padding: 8pt 12pt; border-bottom: 1pt solid #CBD5E1; }
table td { padding: 8pt 12pt; border-bottom: 0.5pt solid #E2E8F0; vertical-align: top; }
thead { display: table-header-group; }
tr { page-break-inside: avoid; }

blockquote {
  border-left: 4pt solid #06B6D4;
  background: #F8FAFC;
  padding: 12pt 16pt;
  margin: 16pt 0;
  border-radius: 4pt;
}

code { background: #F1F5F9; padding: 2pt 6pt; border-radius: 3pt; font-family: 'JetBrains Mono', monospace; font-size: 9.5pt; }
pre { background: #0F172A; color: #F8FAFC; padding: 16pt; border-radius: 6pt; overflow-x: auto; font-size: 9.5pt; }

.cover { page-break-after: always; }
.callout { background: #F8FAFC; border-left: 4pt solid #06B6D4; padding: 16pt; border-radius: 6pt; margin: 20pt 0; }
.priority-P0 { background: #0F172A; color: #fff; padding: 2pt 8pt; border-radius: 12pt; font-size: 9pt; font-weight: 600; }
.priority-P1 { background: #06B6D4; color: #fff; padding: 2pt 8pt; border-radius: 12pt; font-size: 9pt; font-weight: 600; }
.priority-P2 { background: #10B991; color: #fff; padding: 2pt 8pt; border-radius: 12pt; font-size: 9pt; font-weight: 600; }
.priority-Future { background: #64748B; color: #fff; padding: 2pt 8pt; border-radius: 12pt; font-size: 9pt; font-weight: 600; }
.priority-Avoid { border: 1pt solid #EF4444; color: #EF4444; padding: 2pt 8pt; border-radius: 12pt; font-size: 9pt; font-weight: 600; }
```

48. 10/10 PRD Hardening Layer

This section is the final upgrade layer that converts the PRD from descriptive documentation into an execution-control document for product, engineering, design, QA, AI, support, and GTM teams.

48.1 Final Product Thesis

InnovateX Revenue OS should be built as a vertical revenue infrastructure platform, not as a generic CRM with AI features. Its first job is to capture demand, qualify demand, convert demand, attribute demand, and retain demand for the selected ICPs. Every feature that does not strengthen one of these five jobs must be deferred or removed.

Thesis Component	Product Decision
Category	Vertical AI-powered Revenue Operating System
Primary wedge	Done-for-you service implementation
Software destination	Multi-tenant SaaS with templates, attribution, AI, and workflows
MVP customer	Coaches and EdTech first; SaaS founders as adjacent validation
Expansion customer	Ecommerce owners/agencies and high-value international local businesses after validation
Core moat	Workflow lock-in + first-party event data + vertical templates + service-validated playbooks
Do not become	Generic CRM, generic automation tool, Hyros clone, LMS, accounting tool, project management platform

48.2 Definition of Ready

A feature is ready for engineering only when all required inputs below are complete.

Readiness Area	Requirement
User problem	The exact ICP pain is written in one sentence
Business impact	Feature maps to capture, qualification, conversion, attribution, retention, or delivery leverage
Priority	P0/P1/P2/Future/Avoid label is assigned
Workflow	Trigger, user action, system action, success state, and failure state are defined
Data model	Required entities, fields, events, and relationships are identified
Permissions	Allowed and denied roles are defined
Acceptance criteria	Testable criteria exist for happy path, edge case, failure case, and tenant isolation
Analytics	Success metric and event instrumentation are defined

Readiness Area	Requirement
AI behavior	AI prompt, inputs, outputs, confidence, fallback, and review rules are defined if AI is involved
Dependencies	Integration, legal, design, support, and infrastructure dependencies are listed

48.3 Definition of Done

A feature is done only when it passes product, engineering, QA, security, data, and support checks.

Completion Area	Done Standard
Functionality	Works for the defined role, ICP template, and tenant type
Data integrity	Creates correct records and events; no orphaned or duplicate records in normal flow
Attribution	Source, campaign, channel, and confidence status persist across the workflow where applicable
Security	RBAC, tenant isolation, audit logging, and sensitive-field handling pass tests
Reliability	Retry, fallback, and failure notification behavior works
Performance	Meets p95 targets for read/write/API interactions
UX	Empty states, error states, loading states, mobile responsiveness, and accessibility pass review
AI quality	AI outputs meet evaluation thresholds and low-confidence outputs route to human review
Analytics	Required events are emitted, documented, and visible in dashboards/logs
Support readiness	Internal support notes, troubleshooting steps, and known limitations are documented

48.4 MVP Epics and Sprintable Backlog

Epic ID	Epic	MVP Outcome	Priority	Owner
E-001	Tenant Foundation	Secure multi-tenant workspaces with users, roles, settings, and audit logs	P0	Engineering + CTO
E-002	Lead Capture	Forms, WhatsApp click tracking, Meta Lead Ads, and manual lead creation	P0	Product + Backend
E-003	Source Attribution	UTM capture, source persistence, channel mapping, confidence labels	P0	Product + Data
E-004	AI Qualification	Configurable AI qualification flow with score, reason, and route	P0	AI + Backend

Epic ID	Epic	MVP Outcome	Priority	Owner
E-005	CRM Pipeline	Kanban pipeline, lead timeline, tasks, stages, and owner assignment	P0	Product + Frontend
E-006	Nurture Engine	Basic WhatsApp/email follow-up sequences with pause/opt-out logic	P0	Automation + Backend
E-007	Booking	Calendar integration, booking events, reminders, no-show status	P0	Integrations
E-008	Payments	Payment link generation and payment status webhook	P0	Integrations
E-009	Dashboards	Owner dashboard, attribution dashboard, funnel dashboard, activity dashboard	P0	Data + Frontend
E-010	Admin Console	Tenant health, integration health, support access, impersonation audit	P0	Platform
E-011	QA + Observability	Logs, traces, alerts, failure queues, audit trails, test automation	P0	QA + DevOps
E-012	Template Packs	Coach and EdTech templates with default pipelines, questions, dashboards, and sequences	P0	Product + RevOps

48.5 P0 User Stories

Story ID	User Story	Acceptance Snapshot
US-001	As a tenant owner, I want every lead from forms, WhatsApp, and Meta to enter one inbox so that no paid demand is lost.	Lead appears within 30 seconds with correct source, channel, timestamp, and tenant ID
US-002	As a coach, I want AI to qualify leads before they reach me so that I only speak with high-fit prospects.	AI asks required questions, stores answers, generates score, and routes low-confidence cases to human review
US-003	As a sales user, I want a full lead timeline so that I can understand context before follow-up.	Timeline shows source, messages, qualification, booking, call, payment, tasks, and owner changes
US-004	As an EdTech operator, I want counselor-level pipeline visibility so that launch follow-up does not become chaos.	Leads are assigned, status changes are visible, and counselor performance dashboard updates
US-005	As a founder, I want attribution from source to booking and payment so that I know which campaigns and channels produce revenue.	Source persists from click to lead to booking to payment; unknown sources are labeled, not guessed

Story ID	User Story	Acceptance Snapshot
US-006	As an admin, I want automations to pause when a lead status changes so that prospects do not receive irrelevant follow-ups.	Status change stops or branches the sequence and logs the reason
US-007	As a tenant owner, I want weekly revenue insights so that I can act without manually reading every dashboard.	Weekly briefing summarizes pipeline, conversion, attribution, risks, and recommended actions
US-008	As a super admin, I want safe impersonation so that support can help tenants without creating data risk.	Impersonation requires reason, is time-limited, and is fully audit logged

48.6 Data Quality Rules

Data Area	Rule	Failure Handling
Lead source	Source must be captured as <code>confirmed</code> , <code>inferred</code> , or <code>unknown</code> ; never silently overwritten	Show data quality warning in attribution dashboard
UTM values	UTM parameters must persist from first touch unless explicitly superseded by configured attribution model	Store original and latest source separately
Duplicate leads	Dedupe by phone/email/WA ID with tenant-scoped matching	Merge candidates go to review if confidence is low
Consent	Consent timestamp, channel, and opt-out status must be stored for outbound communication	Block sends where consent is missing or opt-out exists
Payment events	Payment status must reconcile with deal status	Mismatch enters reconciliation queue
AI outputs	AI-generated scores, summaries, and recommendations must include confidence and editable fields	Low-confidence outputs route to human review
Automation events	Every automation run must create a success/failure log	Failed runs retry or alert based on severity

48.7 Attribution Confidence Model

Confidence Label	Meaning	Example	Dashboard Treatment
Confirmed	Source is directly captured through UTM, tracking link, platform webhook, or first-party event	Meta Lead Ad webhook includes campaign ID	Count normally
Inferred	Source is derived from partial context or matching logic	WhatsApp lead matched from clicked WA tracking link	Count with confidence badge
Unknown	Source cannot be reliably determined	Manual entry without source	Show as unknown; do not invent
Conflicting	Multiple sources claim the same conversion	Meta and Google both claim same lead	Send to reconciliation logic

48.8 AI Evaluation Framework

AI Feature	Evaluation Metric	Minimum Standard	Human Review Rule
AI qualification	Match with human reviewer	85%+ agreement on sample	Review all low-confidence or high-ticket leads
Lead scoring	Score band agreement	80%+ within one score band	Allow manual override with reason
Call summary	Objection + next-step capture	80%+ reviewer agreement	Sales user approves before sending follow-up
Follow-up drafts	Send-without-major-edit rate	70%+	Human approval before send in MVP
Weekly briefing	Metric accuracy	100% for numbers; narrative must reference actual data	AI cannot invent numbers or conclusions
Proposal drafts	Completeness + compliance	90%+ required fields included	Human approval required always

48.9 AI Guardrails

Risk	Guardrail
Hallucinated metrics	AI must only summarize metrics returned by the analytics layer
Wrong qualification	Use confidence threshold and human-review fallback
Unsafe outbound messaging	Human approval required for AI-generated outbound messages in MVP
Privacy leakage	Prompt context is tenant-scoped and excludes unrelated tenant data
Over-automation	High-stakes actions like payment changes, refunds, and final proposals remain human-approved
Brand mismatch	Use tenant-approved tone, templates, and forbidden-phrase lists

48.10 Integration Dependency Map

Integration	MVP Need	Dependency Risk	Fallback
WhatsApp BSP	Lead capture, nurture, reminders	Policy limits, template approvals, delivery failures	Email/SMS fallback and manual task queue
Meta Lead Ads	Lead source capture	OAuth/token failure, webhook retries	Manual CSV import and retry queue
Calendar	Booking and reminders	API sync failure, timezone issues	Manual booking link + status update
Razorpay/Cashfree/Stripe	Payment link + status	Webhook mismatch, market coverage	Manual payment status entry with audit log
Email provider	Nurture and notifications	Deliverability and bounce handling	In-app tasks and WA fallback
LLM provider	Qualification, summaries, drafts	Latency, cost, availability, quality	Fallback model + human-only mode

48.11 QA Strategy

QA Layer	Test Coverage
Unit tests	Scoring logic, dedupe, routing, permissions, event creation
Integration tests	Meta webhook, WhatsApp webhook, calendar booking, payment webhook, email send
End-to-end tests	Click source link → lead created → qualified → booked → payment → dashboard update
Security tests	Tenant isolation, RBAC, impersonation logs, export permissions, API auth
AI tests	Prompt regression, hallucination checks, output schema validation, low-confidence routing
Data tests	Event completeness, attribution reconciliation, duplicate detection, consent enforcement
Performance tests	Dashboard p95, lead creation p95, webhook throughput, queue processing
UAT	Coach workflow, EdTech workflow, SaaS founder workflow, sales-user workflow

48.12 Launch Gates

Gate	Requirement	Go/No-Go Rule
Alpha	Internal InnovateX team can run one complete service client workflow	No external client until internal dogfooding passes
Design Partner	3-5 selected clients complete activation event	Continue only if >80% activate
Private Beta	10-20 tenants use MVP for 30 days	Continue only if retention and data quality pass thresholds
Public Beta	Self-serve onboarding works for selected ICPs	Continue only if support load is manageable
Public SaaS	Billing, support, monitoring, security, documentation, and onboarding are production-ready	Launch only after critical defects are zero

48.13 KPI Hierarchy

Level	Metric	Why It Matters
North Star	Qualified revenue opportunities created per tenant	Captures lead quality, conversion potential, and product value
Activation	First lead captured + AI qualified + booking created	Proves the core workflow works
Conversion	Booking per qualified lead	Measures revenue workflow effectiveness
Attribution	% leads with confirmed/inferred source	Measures tracking trust
Retention	Weekly active tenant usage	Measures operational dependency
Efficiency	Service hours saved per client setup	Measures service-to-software leverage

Level	Metric	Why It Matters
AI usefulness	AI draft approval rate	Measures practical AI value
Reliability	Automation success rate	Measures platform trust

48.14 Product Governance Cadence

Cadence	Meeting	Output
Daily during build	Engineering standup	Blockers, build progress, defect status
Weekly	Product/RevOps review	Feature decisions, client learnings, backlog refinement
Weekly	Data/AI quality review	AI accuracy, attribution gaps, data quality issues
Biweekly	Demo review	Working software demo against PRD acceptance criteria
Monthly	Founder strategy review	ICP validation, pricing, roadmap, service-to-product learnings
Quarterly	PRD refresh	Update roadmap, assumptions, metrics, and market validation

48.15 Final 10/10 Build Instruction

Build the narrowest version that proves the complete revenue loop: source captured → lead qualified → booked → followed up → paid → attributed → reported. Do not build broad horizontal CRM features until this loop is reliable, repeatable, and measurable for the first ICPs.

Build Now	Validate Later	Avoid
Lead capture, AI qualification, booking, pipeline, payment status, attribution dashboard, template packs	Multi-touch attribution, pixel script, ecommerce deep integrations, local business template, advanced AI coaching	LMS, full ad management, accounting, generic CRM bloat, project management, marketplace

49. BRD Alignment and Coverage Layer

This layer formally matches the PRD against the uploaded BRD v3.1 so the PRD can be used as the execution document without losing the strategic intent, revised audience definition, attribution upgrade, and service-to-software architecture from the BRD.

49.1 BRD Match Verdict

Evaluation Area	Verdict	Notes
Audience and market definition	Fully matched	Coaches, EdTech, SaaS founders, ecommerce owners/agencies, and international local businesses are reflected; Indian local businesses remain excluded unless later validated.
Product vision and positioning	Fully matched	PRD keeps Revenue OS as vertical AI-powered revenue infrastructure, not a generic CRM or Hyros clone.
Business objectives	Fully matched	BRD objectives map into product goals, MVP definition, tracking goals, service-delivery goals, and roadmap.
Core modules	Fully matched	Lead Capture, AI Qualification, Nurture, Booking, Call Intelligence, CRM/Pipeline, Tracking, Analytics, Payments, Admin/Multi-Tenancy, Support, and Templates are all present.
Functional requirements	Fully matched at PRD level	P0/P1/future scope is preserved and translated into module specs, feature matrix, automation specs, dashboards, and acceptance criteria.
Attribution & Tracking Engine	Fully matched and strengthened	PRD includes UTM capture, WA click tracking, event timeline, booking attribution, conversion attribution, dashboards, confidence model, and future pixel/server-side tracking.
AI requirements	Fully matched and strengthened	PRD includes AI qualification, scoring, call summaries, drafts, weekly briefings, prompt versioning, logging, confidence thresholds, evaluation, and guardrails.
Automation requirements	Fully matched	Capture, routing, booking, nurture, ghosted reactivation, payment status, weekly briefing, support routing, onboarding, and failure alerts are included.
Integrations	Fully matched with phase gating	Must-have integrations are in MVP/V1; future integrations remain future and dependency-managed.
Data/security/compliance	Fully matched with governance added	PRD includes data entity catalog, event taxonomy, tenant isolation, RBAC, audit logs, consent/opt-out, privacy notes, and open legal items.

Evaluation Area	Verdict	Notes
Roadmap and go/no-go gates	Fully matched and strengthened	BRD roadmap themes map to PRD phases, phase gates, launch gates, KPI hierarchy, and product governance cadence.
Service-to-software alignment	Fully matched	PRD preserves “services are the wedge, software is the destination” and converts service learnings into product governance.

49.2 BRD Section-to-PRD Coverage Matrix

BRD Area	BRD Intent	Matching PRD Section(s)	Match Status
Revised Audience and Market Definition	Use founder-updated audience and market exclusions	3.2, 7, 8, 9.10, 18.2, 38, 49	Matched
Executive Summary	Define product as software destination of InnovateX	3, 4, 5, 6	Matched
Product Background	Show service delivery as source of product insight	6, 38, 39, 45, 48.14	Matched
Product Vision	Revenue OS from capture to retention	4, 5, 9, 48.1	Matched
Business Objectives	SaaS foundation, capture, qualify, nurture, attribution, security, benchmarks	11, 18, 21, 27, 32, 38, 48.13	Matched
Software Business Requirements	BRD-level business capabilities SW-BR-001 to SW-BR-010	17–22, 24–28, 31–38, 44, 48, 49.3	Matched
Product Problem Statement	Revenue operations fragmentation and founder bottleneck	10, 15, 16	Matched
Current State / Future State	SaaS in build, validation needed, future platform direction	17, 18, 38, 42, 43, 45	Matched
Product Scope / Out of Scope	Define launch scope and exclusions	17, 18.10, 37, 45.5	Matched
Target Users / Personas / Roles	Define all users and access boundaries	13, 14, 16	Matched
Core Product Modules	Define SaaS module inventory	19	Matched
Use Cases and Journeys	Capture to payment lifecycle	15, 16, 18.5, 28	Matched
Functional Requirements	Detailed SW-FR requirements	20, 21, 22, 24, 25, 26, 28, 36, 49.4	Matched
Non-Functional Requirements	Performance, scalability, availability, usability, maintainability, observability	34, 35, 36, 48.11	Matched
AI Requirements	AI qualification, scoring, drafting, logging, thresholds	24, 36, 48.8, 48.9	Matched
Automation Requirements	Triggered workflows across revenue lifecycle	25, 28, 36	Matched
Integration Requirements	WhatsApp, Meta, Calendar, Payments, Email, LLM, Supabase, future integrations	26, 48.10	Matched

BRD Area	BRD Intent	Matching PRD Section(s)	Match Status
Data Requirements	Lead, conversation, call, payment, attribution, tracking, identity, opt-out data	27, 28, 48.6, 48.7	Matched
Security Requirements	Encryption, MFA, RBAC, tenant isolation, audit, impersonation	32, 35.3, 36, 48.3	Matched
Compliance Requirements	DPDP, WhatsApp policy, GDPR future, privacy/legal To Be Finalized	33, 43.10	Matched
Reporting and Analytics Requirements	Pipeline, attribution, tracking, campaign, activity, briefing, benchmark	22, 23, 48.13	Matched
Notification/Admin/Support Requirements	Alerts, tenant management, integration health, support console	22, 25, 26, 31, 36	Matched
Onboarding Requirements	Assisted first, self-serve later, activation events	31, 18.6, 18.8, 48.12	Matched
System Architecture and Data Flow	Multi-tenant, event-driven, LLM/ integration architecture	35, 21.5, 28.1, 48.10	Matched
Business Rules and Acceptance Criteria	Rules for automation, permissions, attribution, opt-out, payment status	12, 21, 25, 32, 36, 48.2, 48.3	Matched
Assumptions, Constraints, Dependencies, Risks	Make unresolved items explicit	41, 42, 43, 48.10, 49.8	Matched
Success Metrics and Roadmap	Define success and phased rollout	11, 18.7, 38, 46, 48.13	Matched
Traceability Matrix	Connect BRD to PRD	44, 49	Strengthened
Service and Software Alignment	Services teach product; product improves delivery	6, 39, 45, 48.14, 49.9	Matched
Future Expansion	Benchmarks, white-label, public API, mobile, ecosystem	17.5, 38.8, 40, 50-equivalent future scope in 17.5	Matched

49.3 BRD Business Requirement Coverage

BRD Requirement	BRD Requirement Name	PRD Translation	PRD Location	Status
SW-BR-001	Unified Lead Capture	Lead capture from forms, WhatsApp, Meta, manual entry, with tenant-scoped records	17.2, 19.1, 20, 25.2.1	Covered
SW-BR-002	Founder-Independent Qualification	AI qualification, scoring, routing, human fallback	19.2, 19.3, 24, 48.8	Covered
SW-BR-003	WhatsApp-First Nurture	WA/email nurture, pause logic, opt-out	19.4, 25.2.4, 26, 33	Covered
SW-BR-004	Pipeline Visibility	Kanban, dashboards, stage/source metrics	19.7, 22.2.2, 23	Covered
SW-BR-005	Multi-Tenant SaaS	Tenant isolation, RBAC, admin console, audit logs	13, 19.12, 32, 35.3	Covered

BRD Requirement	BRD Requirement Name	PRD Translation	PRD Location	Status
SW-BR-006	Assisted to Self-Serve Onboarding	Assisted onboarding first, self-serve later, activation event	31, 38, 48.12	Covered
SW-BR-007	Expert-Led Sales Fit	Timeline, calls, follow-up, proposals, booking, payments	16, 19, 20, 24	Covered
SW-BR-008	Benchmark Data Foundation	Future anonymized benchmarks and opt-in controls	11.1, 17.5, 22.2.12, 27, 48.1	Covered as Future
SW-BR-009	Internal Delivery Enablement	Internal tool / design partner phases and operator workflows	6, 18, 38.3, 39, 48.14	Covered
SW-BR-010	Platform Expansion	Modular architecture, integrations, future modules	17.5, 26, 35, 38.8	Covered

49.4 BRD Functional Requirement Coverage

BRD Functional Requirement Family	Requirement IDs	Matched PRD Sections	Coverage Decision
Lead capture and source tracking	SW-FR-001 to SW-FR-004	19.1, 20, 21, 25.2.1, 26, 28	MVP/P0
AI qualification and routing	SW-FR-005 to SW-FR-007	19.2, 19.3, 24, 25.2.2, 48.8	MVP/P0
Nurture and personalization	SW-FR-008 to SW-FR-009	19.4, 24.1, 25.2.4, 48.9	MVP for basic nurture; AI personalization P1/V1
Calendar and call intelligence	SW-FR-010 to SW-FR-012	19.5, 19.6, 25.2.3, 26	MVP/P0 basic; advanced call intelligence V1
Follow-up and proposal drafts	SW-FR-013 to SW-FR-014	24.1, 48.8, 48.9	V1/P1 with human approval
Pipeline and lead timeline	SW-FR-015 to SW-FR-016	19.7, 20, 22.2.2, 36	MVP/P0
Payments	SW-FR-017 to SW-FR-018	19.10, 25.2.6, 26, 27	MVP/P0
Attribution and tracking dashboards	SW-FR-019 to SW-FR-019G	21, 22.2.3–22.2.5, 23, 28, 48.7	MVP/P0
Advanced tracking	SW-FR-019H to SW-FR-019J	21.4, 21.15, 26, 38.7, 48.10	Future/P2
Weekly summary and ghosted reactivation	SW-FR-020 to SW-FR-021	22, 23, 25.2.5, 25.2.7	V1/P1
Admin, users, audit, support, KB, notifications	SW-FR-022 to SW-FR-027	13, 19.11–19.16, 25, 26, 31, 32, 36	MVP/P0 for admin/users/audit/notifications; support/KB P1

49.5 Tracking Engine Match Checklist

Tracking Requirement	PRD Match	Build Phase
UTM capture	21.3, 21.6, 28.2, 48.6	MVP
Lead source tracking	19.1, 21, 22.2.3, 23	MVP
WhatsApp click tracking	19.1, 21.3, 21.6, 26	MVP

Tracking Requirement	PRD Match	Build Phase
Form tracking	19.1, 21.3, 28	MVP
Meta Lead Ads attribution	21.3, 26, 48.10	MVP
Booking attribution	21.3, 21.6, 22.2.3, 28	MVP
Pipeline stage attribution	21.3, 22.2.2, 28	MVP
Payment/conversion attribution	21.3, 21.6, 25.2.6, 28	MVP
Call attribution	21.3, 21.6, 19.6	V1 / Should
Campaign dashboard	22.2.5, 23	MVP
Multi-touch attribution	21.4, 21.15, 38.7	Future
Pixel/event script	21.4, 26, 38.7	Future
Server-side conversion events	21.4, 26, 48.10	Future
Ad-platform feedback loop	21.4, 26, 48.10	Future

49.6 BRD Non-Functional, AI, Automation, Integration, and Data Coverage

BRD Requirement Group	BRD IDs / Scope	PRD Match	Status
NFRs	SW-NFR-001 to SW-NFR-009	34, 35, 36, 48.11	Covered
AI	SW-AI-001 to SW-AI-010	24, 48.8, 48.9	Covered and strengthened
Automation	SW-AUTO-001 to SW-AUTO-009	25, 28, 36	Covered
Integrations	SW-INT-001 to SW-INT-017	26, 48.10	Covered with phase gates
Data	SW-DATA-001 to SW-DATA-010	27, 28, 48.6, 48.7	Covered and strengthened
Security	SW-SEC-001 to SW-SEC-009	32, 35.3, 36, 48.3	Covered
Reporting	SW-RPT-001 to SW-RPT-005	22, 23, 48.13	Covered
Admin	SW-ADMIN-001 to SW-ADMIN-004	19.12, 22.2.8–22.2.11, 31, 36	Covered

49.7 Matched PRD Build Order from BRD

Build Order	Capability	Why It Comes Here	BRD Source Logic
1	Multi-tenant foundation + RBAC + audit	Required before any client data enters platform	Multi-tenant SaaS, security, admin
2	Lead capture + source tracking	Core revenue leakage problem starts at capture	Unified lead capture, attribution
3	AI qualification + scoring + routing	Main founder-bottleneck reducer	Founder-independent qualification
4	CRM pipeline + lead timeline	Operational source of truth	Pipeline visibility, expert-led sales fit
5	Booking + reminders	Converts qualified demand into sales conversations	Calendar booking, nurture

Build Order	Capability	Why It Comes Here	BRD Source Logic
6	Nurture engine + opt-out controls	Prevents ghosting and supports multi-channel follow-up	WhatsApp-first nurture, compliance
7	Payments + conversion status	Closes the source-to-revenue loop	Payment/conversion attribution
8	Dashboards + reports	Makes the system trusted by owners/operators	Reporting and analytics
9	Call intelligence + AI follow-up drafts	Improves sales velocity after MVP loop works	Call intelligence, AI drafts
10	Advanced tracking, benchmarks, ecosystem	Expand only after workflow validation	Future expansion and data moat

49.8 Remaining To-Be-Finalized Items Preserved from BRD

These items should not be guessed inside the PRD. They are intentionally kept open until validated by the founder, CTO, legal, or design partners.

Open Item	Why It Remains Open	Owner to Finalize
Exact CTO / engineering capacity	Needed for sprint timeline and architecture choices	Founder + CTO
Final tech stack and deployment environment	BRD gives reference direction but CTO must finalize	CTO
WhatsApp BSP choice	WATI/Wablas/official API selection affects policy, reliability, and pricing	CTO + RevOps
Payment providers by market	Razorpay/Cashfree/Stripe/local providers depend on launch geography	Product + Finance
Compliance policies and legal docs	Privacy policy, DPA, retention, regional compliance need legal review	Legal + Founder
AI thresholds	Confidence thresholds should be calibrated with real pilot data	AI Engineer + Product
Integration priority after MVP	Depends on design partner needs	Product + GTM
Pricing and packaging	BRD marks pricing as To Be Finalized; PRD keeps pricing logic, not final numbers	Founder + GTM
Local business country prioritization	BRD requires validation before expansion	Founder + Market Research
Support SLA values	SLA depends on plan, support model, and team capacity	Client Success

49.9 Service-to-Software Alignment Match

BRD Service Layer	PRD Product Translation	Outcome
Diagnostic / Audit	Audit workspace, source-leak scorecard, dashboards, tracking quality indicators	Services identify revenue leakage faster
Revenue OS Build	Tenant templates, onboarding checklist, integrations, sequences, AI qualification, dashboards	Implementation becomes repeatable and faster

BRD Service Layer	PRD Product Translation	Outcome
Revenue OS Operator	Weekly briefing, QBR-style reports, operator dashboards, failed automation alerts	Retainers become more scalable and data-backed
Client Feedback Loop	Product governance cadence, backlog refinement, design partner gates	Service insights become product roadmap
Data Moat	Event taxonomy, anonymized benchmarks, attribution confidence model	Platform becomes defensible over time

49.10 Final BRD-to-PRD Match Statement

This PRD is now matched to the BRD at the correct product-document level. The BRD defines the business requirement, market logic, software requirement families, service-to-software model, risks, and future expansion. This PRD converts those into product scope, user journeys, modules, feature requirements, tracking specifications, AI controls, data models, dashboards, acceptance criteria, launch gates, and engineering governance.

Final Check	Result
No revised audience mismatch	Pass
No local-business India targeting mistake	Pass
No missing tracking/attribution engine	Pass
No generic CRM drift	Pass
No Hyros-clone confusion	Pass
No missing service-to-software loop	Pass
No missing AI governance	Pass
No missing tenant/security/control layer	Pass
No missing roadmap or phase gates	Pass
No unresolved BRD item falsely finalized	Pass

End of Document

InnovateX Revenue OS — Product Requirements Document

Version 1.2 — 10/10 BRD-Matched Execution Edition

Prepared from BRD v3.1 — June 2, 2026

“Services are the wedge. Software is the destination.”
